Chapter 1

PART I: STRUCTURED KNOWLEDGE BASE DOCUMENT (UNFPA-R-05)

This section contains the structured knowledge base document for integration into the UNFPA Research Intelligence System.

1.1 EXECUTIVE SUMMARY

Singapore's philanthropic sector is substantial — 126 tracked philanthropic organisations disbursed S$419 million in FY2024 (Soristic 2025 report) — but only a small subset directly funds maternal, reproductive, or children's health, and even fewer fund these areas internationally. This document maps the Singapore-based foundations, charities, and intermediary organisations that are relevant to UNFPA's SRHR-resilience agenda, classifying them into four tiers: direct maternal and child health funders, significant health givers with potential alignment, ecosystem enablers and intermediaries, and civil society and operational charities. The directory draws on publicly verified data from annual reports, the Commissioner of Charities registry, the Soristic philanthropic tracking reports, AVPN member data, and foundation websites.

The most immediately relevant development for the LKYSPP team is the May 2025 launch of the Philanthropy Asia Alliance (PAA) Health for Human Potential (HHP) Community — a multi-funder initiative targeting US$100 million by 2030 for maternal, newborn, and child health and nutrition (MNCHN) in Southeast Asia, co-led by the Gates Foundation, Quantedge Advancement Initiative, Tanoto Foundation, and Temasek Foundation. This initiative represents the single most aligned funding vehicle to UNFPA's resilience agenda currently operating out of Singapore.

1.2 KEY FACTS

- **Total philanthropic giving in Singapore**: S$419 million disbursed by 126 tracked organisations in FY2024; S$431 million in FY2023 (Soristic 2025 and 2024 editions)
- **Singapore's World Giving Index ranking**: 3rd globally (2024), the nation's highest ranking to date — up from 22nd in 2023
- **Registered charities**: Approximately 2,400 registered with the Commissioner of Charities; the Ministry of Health (MOH) is the Sector Administrator for health charities
- **Tax incentive for IPC donations**: 250% tax deduction for donations to Institutions of a Public Character (until 31 December 2026)
- **New overseas humanitarian deduction**: 100% tax deduction for overseas cash donations through designated charities addressing emergency humanitarian needs (January 2025–December 2028)
- **Temasek Foundation Richard Magnus Endowment**: S$100 million endowment launched June 2023 specifically for mothers and children's health and well-being
- **Tanoto Foundation Medical Research Fund**: Up to S$5 million per year for medical research including maternal and child health (launched 2023)
- **PAA Health for Human Potential Community**: US$100 million target by 2030 for MNCHN and infectious diseases in Southeast Asia (launched May 2025)
- **DBS Foundation commitment**: S$102.6 million committed in 2024; S$1 billion over the next decade; launched KidSTART Pregnant Mum & Baby Nutrition

Programme (September 2025)
- **KKH centenary**: KK Women's and Children's Hospital mobilised S$30 million+ in philanthropic funding for 15 new population health programmes (October 2024)
- **Family offices**: Over 2,000 single-family offices registered under MAS 13O/13U schemes (end-2024, up from ~1,400 in 2023); managing S$90 billion+ in assets; estimated 10–20% have genuine impact investing appetite
- **Lee Foundation**: S$13.6 billion in total assets — by far the largest foundation in Singapore; disbursed S$33.2 million in 2024
- **Khoo Teck Puat Foundation**: Over S$345 million donated to healthcare since founder's death; S$135 million to SingHealth in January 2026 — the largest single gift to a Singapore public healthcare institution; S$50 million to NUH Children's Medical Institute
- **UBS Optimus Foundation Singapore**: Disbursed S$17.1 million in Singapore (ranked in top 10 givers); global fund raised record USD 366 million in 2024; focus on children's health, education, protection

---

1.3 THE REGULATORY ENVIRONMENT FOR HEALTH PHILANTHROPY

Singapore's charity sector is regulated by the Commissioner of Charities (COC) under the Ministry of Culture, Community and Youth (MCCY). The Ministry of Health (MOH) serves as the Sector Administrator for charities with health-related charitable objects. As of the most recent data, approximately 2,400 charities are registered, with the health sector representing a meaningful but not dominant share (religious organisations account for approximately 46% of all charities).

The key incentive structure for health philanthropy is the Institution of a Public Character (IPC) framework. IPCs — charities approved to issue tax-deductible receipts — offer donors a 250% tax deduction on qualifying donations (extended through 31 December 2026). This makes Singapore-based giving significantly tax-advantaged, particularly for high-net-worth individuals and family offices subject to Singapore tax.

A significant policy development for UNFPA's international mandate is the Overseas Humanitarian Assistance Tax Deduction Scheme, piloted from January 2025 to December 2028, which extends 100% tax deduction to overseas cash donations made through designated charities for emergency humanitarian needs. While the scheme is limited to designated charities and emergency contexts, it signals growing government interest in facilitating Singapore-based international philanthropy.

The Philanthropy Tax Incentive Scheme (2023) allows single-family offices to receive 100% tax deduction for overseas donations — directly incentivising the over 2,000 SFOs to use Singapore as a base for international giving.

1.4 TIER 1: DIRECT MATERNAL AND CHILD HEALTH FUNDERS

1.4.1 Temasek Foundation

Temasek Foundation is the philanthropic arm of the Temasek ecosystem. Its most directly relevant initiative is the **Richard Magnus Endowment** — a S$100 million endowment launched on 5 June 2023, dedicated to programmes providing antenatal and postnatal care for mothers and babies and to children's health and well-being. The endowment was named in honour of the late Judge Richard Magnus, founding chairman of Temasek Cares, who championed the Integrated Maternal and Child Wellness Hub (IMCWH) at SingHealth polyclinics — a first-of-its-kind integrated screening service for mothers and children under three, driven by an initial S$2.5 million grant. The IMCWH model has been expanded to Bedok, Tampines, and Sengkang polyclinics, with the Ministry of Health targeting 14 polyclinics by 2025. Temasek Foundation also runs open-call **Public Health Innovations grants** for translational health technologies.

UNFPA alignment: Strong. The endowment's focus on maternal and child health, combined with Temasek Foundation's regional orientation and government-linked credibility, makes it a high-priority engagement target. Access pathway: Temasek Trust / PAA.

1.4.2 Tanoto Foundation

Founded by the Sukanto Tanoto family, Tanoto Foundation launched the **Medical Research Fund (MRF)** in 2023 — the first private philanthropic medical research fund in Singapore — providing up to S$5 million per year for research in maternal and child health, cardiology, diabetes, oncology, and infectious diseases. In its inaugural 2024 round (selected from 100+ applications), the MRF funded research into maternal fertility decline (Prof. Brian Kennedy, NUS) and neonatal allergies (A/Prof. Ashley St John, Duke-NUS). The Foundation also donated S$3 million to establish the **TF Centre for Child and Maternal Health Programmes (CHaMP)** at KK Women's and Children's Hospital (KKH). Total medical research and healthcare giving since 2009 exceeds S$20 million.

UNFPA alignment: Strong on research and evidence generation. The MRF's focus on Asia-prevalent diseases and maternal/child health creates a natural connection to UNFPA's evidence needs.

1.4.3 Quantedge Advancement Initiative

The philanthropic arm of Quantedge Capital, the **Quantedge Advancement Initiative (QAI)** focuses on global health and development and climate action. QAI is a co-lead of the **PAA Health for Human Potential (HHP) Community**, launched in May 2025 alongside the Gates Foundation, Institute of Philanthropy, Tanoto Foundation, and Temasek Foundation — targeting US$100 million by 2030 to reduce preventable deaths and improve MNCHN outcomes in Southeast Asia. QAI also supports Nutri-

tion International's project to improve nutritional status of women and adolescents in the Philippines. Charity Transparency Award winner 2022–2024.

UNFPA alignment: Very strong. The HHP Community's objectives directly mirror UNFPA's SRHR-resilience mandate in Asia. This is the single most aligned funding coalition for the LKYSPP team to engage.

1.4.4 DBS Foundation

DBS Foundation committed S$102.6 million in 2024 (top giver in Soristic 2025) and pledged S$1 billion over the next decade. In September 2025, it launched the **KidSTART Pregnant Mum & Baby Nutrition Programme** with KidSTART Singapore — targeting pregnant mothers from lower-income households with nutrition support, mental wellness workshops, and financial literacy. The Social Enterprise Grant Programme provides SGD 50,000–250,000 grants to businesses in healthcare, nutrition, and education across Asia.

UNFPA alignment: Moderate. DBS Foundation's community focus and grant scale create entry points, particularly for social enterprise models in SRHR.

1.5 TIER 2: SIGNIFICANT HEALTH GIVERS WITH POTENTIAL ALIGNMENT

1.5.1 Lee Foundation

Singapore's largest foundation by total assets (S$13.6 billion), established in 1952 by Lee Kong Chian (founder of OCBC Bank). Disbursed S$33.2 million in FY2024. Lee Foundation's health philanthropy includes a landmark S$50 million gift to SingHealth Duke-NUS Academic Medical Centre — the single largest private gift to a Singapore medical institution — and the Lee Foundation Overseas Medical Bursary providing bond-free financial aid to Singaporeans studying medicine overseas. The Foundation is a generalist funder (education, healthcare, arts, community) and famously private — it does not maintain a public website or open application process. Engagement requires warm introductions through institutional channels (SingHealth, NUS, LKYSPP).

UNFPA alignment: Moderate but high-potential given asset base. Proposals must be structured around institutional partnerships (e.g., named research programme at SingHealth Duke-NUS) rather than direct UNFPA funding.

1.5.2 Moh Family Foundation

Incorporated in 2021 by the family of the late furniture tycoon Laurence Moh. Disbursed S$22.4 million in FY2024. The most health-concentrated major funder in Singapore: **75.1% of grants go to health**, 14.2% to community well-being, 8.7% to social welfare. Supports causes internationally. Specific grant recipients are not publicly disclosed in detail, and the Foundation does not maintain a public website.

UNFPA alignment: Moderate to strong — the most under-explored opportunity in this directory. A foundation incorporated in 2021 with 75.1% health allocation may be actively defining its strategic priorities. The key question is whether its health giving extends to international SRHR. Approach through CFS, AVPN, or private bank advisory.

1.5.3 Low Tuck Kwong Foundation

Established December 2022 by Low Tuck Kwong (founder and chairman of PT Bayan Resources, Indonesia-based coal mining). Disbursed S$23.2 million in FY2024; an exceptional S$127.6 million in FY2023 (~30% of all Singapore philanthropy that year, largely due to a S$101 million gift to LKYSPP for Asian public officer scholarships). Healthcare recipients include hospitals in Singapore and the region.

UNFPA alignment: Low to moderate. The LKYSPP connection is a touchpoint, but fossil fuel wealth origins require reputational due diligence for UNFPA partnership. Health giving is hospital-directed rather than programmatic.

1.5.4 Shaw Foundation

Established 1957 by the Shaw brothers (Run Run Shaw and Runme Shaw). Over US$150 million in lifetime giving. Funded by investments and prime properties (including Shaw Centre). Largest share of funding to the National Kidney Foundation. Also funds paediatric medical research (through Turf Club proceeds), hospitals, and associations for the disabled. Annual disbursement approximately S$5 million.

UNFPA alignment: Low to moderate. Paediatric research funding creates marginal alignment, but established giving patterns and modest annual disbursement make this a supplementary rather than anchor funder.

1.5.5 The Ngee Ann Kongsi

Teochew clan-based philanthropic organisation established in 1845. Disbursed S$40.6 million in FY2024. Major health giving includes S$40 million to SingHealth (via subsidiary Ngee Ann Development) for the Ngee Ann Kongsi Discovery Tower and medical research, and S$12.5 million to NTU for Traditional Chinese Medicine education (October 2024). Giving is directed at Singapore-based medical education and infrastructure.

UNFPA alignment: Low. The Kongsi's Teochew community mandate and education-first orientation make it an unlikely partner for international SRHR programming, despite its capacity for very large health investments.

1.5.6 Khoo Teck Puat Foundation (Estate of Khoo Teck Puat)

The most significant health-focused philanthropic estate in Singapore. Over S$345 million donated to healthcare, medical research, and education since founder's death (2004). Landmark donations: S$125 million for Khoo Teck Puat Hospital (795-bed facility), S$80 million to Duke-NUS Medical School, **S$50 million for the Khoo**

Teck Puat — National University Children's Medical Institute at NUH, and S$10 million for Project MigrantWell (primary care for migrant workers). In **January 2026**, the estate donated **S$135 million to SingHealth** — the largest single gift to a public healthcare institution in Singapore, explicitly targeting **maternal and child health**, cardiovascular sciences, cancer research, and population health. Family fortune: S$9.2 billion. Trustee: Ms Mavis Khoo.

UNFPA alignment: Strong. The January 2026 SingHealth gift specifically names maternal and child health as a research priority. Access through SingHealth Duke-NUS network.

1.5.7 UBS Optimus Foundation (Singapore)

Global philanthropic foundation with significant Singapore operation. Disbursed S$17.1 million in Singapore (Soristic top 10, FY2024). Globally raised record **USD 366 million** in 2024, committed **USD 310 million in grants** reaching 7 million+ people. Focus: children's health (including paediatric oncology), education, protection. Transform Health Fund (USD 100 million) scales innovative healthcare for low-income patients in Africa. SDG Outcomes Fund: USD 100 million (2025 close).

UNFPA alignment: Moderate to strong. Children's health focus and global development orientation create natural alignment. Singapore operation channels UBS private client philanthropy. Access through UBS private banking relationships.

1.5.8 FairPrice Foundation

Corporate foundation (FairPrice Group). Disbursed S$12.7 million in FY2024. Launched **Start Strong, Stay Strong** with KKH as nutrition knowledge partner — Singapore's first preschool nutrition programme (1,000 children in 2024; 20,000 in 2025). Commissioned Full Plate study (2024) and Stay Strong study (2025) on nutrition gaps. Protein Pledge: S$1 million for nutritionally vulnerable Singaporeans.

UNFPA alignment: Low to moderate. Nutrition focus and KKH partnership create marginal touchpoint but mandate is domestic food security, not international SRHR.

1.6 TIER 3: ECOSYSTEM ENABLERS AND INTERMEDIARIES

1.6.1 Community Foundation of Singapore (CFS)

CFS is Singapore's largest holder of donor-advised funds (DAFs), having raised S$353 million in donations and disbursed S$210 million+ in grants. It disbursed S$28.4 million in FY2024. As a cause-neutral foundation, CFS does not earmark funds for specific health sub-sectors but serves as the primary channel for Singapore-based donors (including family offices) to structure international giving. CFS manages due diligence for international grant recipients — a critical pathway for any UNFPA-related funding vehicle.

1.6.2 Lien Foundation

Disbursed S$24.4 million in FY2024. Focus areas are palliative care, eldercare, and seniors' mental well-being. Lien Foundation is one of Singapore's most internationally active foundations, having funded programmes in ASEAN countries (water, sanitation, urban poor). It began exiting the early childhood development space in 2022. While not a direct SRHR funder, its innovation-oriented, risk-tolerant model and ASEAN relationships make it a useful reference and potential connector.

1.6.3 AVPN (Asian Venture Philanthropy Network)

Singapore-headquartered network of 700+ members across 43 markets. AVPN launched a US$1 million pooled fund to improve MNCHN in Southeast Asia. As Asia's largest social investment network, AVPN is the primary access point for engaging family offices and impact investors on health-related funding. The annual AVPN Global Conference is a key convening opportunity.

1.6.4 Philanthropy Asia Alliance (PAA)

Temasek Trust-linked platform launched at the inaugural Philanthropy Asia Summit. The **Health for Human Potential (HHP) Community** (May 2025) is the most directly relevant initiative — US$100 million target by 2030, co-led by Gates Foundation, Quantedge, Tanoto, and Temasek Foundation, focused on MNCHN and infectious diseases in Southeast Asia. PAA convened 1,000+ participants at its 2025 Summit, including President Tharman Shanmugaratnam and Bill Gates.

1.7 TIER 4: CIVIL SOCIETY AND OPERATIONAL CHARITIES

These organisations are potential implementing partners, knowledge partners, or advocacy allies rather than funders:

1.7.1 AWARE Singapore (Association of Women for Action and Research)

Established 1985. Singapore's leading gender equality advocacy organisation. Operates the Sexual Assault Care Centre (SACC) — Singapore's first and only specialised care service for sexual violence survivors. Core advocacy on reproductive rights, the "motherhood penalty" in workplace advancement, and women's representation. In March 2025, AWARE publicly defended feminist advocacy as essential to equality, responding to PAP Women's Wing remarks. AWARE's research capability on women's health policy and reproductive rights makes it the strongest knowledge partner for SRHR advocacy framing in the Singapore context.

UNFPA role: Knowledge partner for advocacy strategy; research partner on women's health policy; potential co-convenor for SRHR policy discussions.

1.7.2 KK Women's and Children's Hospital (KKH)

Established 1924 (celebrated centenary October 2024). Singapore's largest public women's and children's hospital (830 beds). At its centenary celebration — graced by President Tharman Shanmugaratnam — KKH announced 15 new population health programmes backed by S$30 million+ in philanthropic funding, including the PELiCAN metabolic health network, Preterm Pregnancy Prevention Programme, and **EMPOWER2** community midwifery pilot (400 postnatal mothers in Kallang, Sengkang, Punggol, commencing early 2025). KKH also hosts the SingHealth Duke-NUS MCHRI (launched 2021), the Tanoto Foundation CHaMP Centre, the Temasek Foundation IMCWH, and the Kidz Horizon Appeal (S$17 million+ raised over 20 years). Partnership with WAH Foundation for midwife training in Cambodia since 2013.

UNFPA role: Anchor clinical and research institution. Provides access to Lee Foundation, Tanoto, and Ngee Ann Kongsi philanthropic relationships via SingHealth network. EMPOWER2 model directly relevant to UNFPA's midwifery strengthening agenda.

1.7.3 WAH Foundation (Water and Healthcare Foundation)

Established 2009. Singapore-registered nonprofit. Founded by Christopher Wilson. Partnered with KKH and Mount Alvernia Hospital Singapore since 2013 to train midwives and paediatric nurses in Kampong Chhnang province, Cambodia. Key outcomes: 400+ individuals trained in midwifery and emergency infant care; 200+ midwives trained across the province; **90% drop in maternal mortality** related to childbirth. Operates a train-the-trainer model with 10 Cambodian Core Trainers now delivering training in Khmer. Designed WAH Emergency Life Kits (2017) for isolated rural communities during childbirth.

UNFPA role: Implementation model and proof-of-concept. Demonstrates that Singapore clinical expertise (via KKH) can reduce maternal mortality in developing Asia through train-the-trainer partnerships — exactly the cross-border SRHR-resilience model the LKYSPP team is designing.

1.7.4 Singapore Children's Society

Established 1952. Reached 20,187 children, youth, and families in 2024. Designated KidSTART agency reaching children from low-income households from pregnancy onward with nutrition, developmental screening, and parent-child interaction support. Operates Sunbeam Place (residential care for children aged 2–21), counselling services, and the Flourishing Minds mental health literacy programme across multiple centres.

UNFPA role: Potential implementing partner for child health and early childhood programming in Singapore. KidSTART connection provides access to government's early childhood infrastructure.

1.7.5 Other Operational Charities

- **Club Rainbow Singapore**: Supports children and youth with chronic illnesses through holistic medical, educational, psychosocial, and financial services. Limited direct SRHR alignment.
- **KidSTART Singapore**: Government-linked (MSF) early childhood development programme for low-income families. Partners with DBS Foundation on the Pregnant Mum & Baby Nutrition Programme. Model for government-philanthropic partnership in early life intervention.
- **Ishk Tolaram Foundation**: Singapore-registered CLG (est. 2017). Funded by Tolaram Family Trust (25% beneficiary). Funds healthcare in Nigeria (1,250+ cataract surgeries) and Indonesia. Both operating and grantmaking. Demonstrates model of Singapore-registered foundations funding healthcare in developing countries.
- **Octava Foundation**: Established within last decade. Focus on equitable quality education and early mental well-being promotion. Singapore (primary) and Southeast Asia (supporting). Mental well-being focus intersects with maternal mental health — a growing priority in Singapore (KKH's EMPOWER2 targets postnatal depression).
- **Babes Pregnancy Crisis Support**: Singapore charity providing 24-hour crisis support (hotline: 6206 6641; WhatsApp: 3235 1351) for individuals aged 21 and below with unplanned pregnancies. Offers casework, counselling, and parenting skills support without judgement. Directly relevant to adolescent SRHR — a core UNFPA programme area.
- **Mount Alvernia Hospital (Outreach Team)**: Singapore's only not-for-profit private hospital (~380 beds, ~5,000 deliveries/year). The Outreach Team provides maternity care for financially vulnerable transnational spouses who do not qualify for government subsidies, including prenatal care and childbirth services. Partner with WAH Foundation for Cambodia midwife training since 2017. Founded by FMDM Sisters (1961); 75th anniversary of Sisters' arrival in Singapore celebrated in 2024.
- **Tsao Foundation**: Established 1993 by the Tsao family. Dedicated to improving quality of life for older persons. Operates Community for Successful Ageing (ComSA) centres. Partners with Duke-NUS CARE for long-term care research. Dr Mary Ann Tsao recognised by the UN as one of 50 inspirational leaders globally for ageing. The Tsao Family Office funds the Foundation's work through impact investing. Not a direct SRHR funder, but its life-course approach and Duke-NUS research partnerships create potential connectors for intergenerational health programming.

1.8 FAMILY OFFICES WITH HEALTH/PHILANTHROPY RELEVANCE

Singapore hosts over 2,000 single-family offices (end-2024, up from 200 in 2019). MAS does not publish a public SFO registry; the following are publicly known through

media reporting and philanthropic filings. The complete directory is in the Annex Report (UNFPA-R-05-ANNEX, Chapter 8).

1.8.1 Directly Health-Relevant Family Offices/Foundations

Principal	Entity	Net Worth	Health Relevance
Khoo Teck Puat (estate)	Khoo Teck Puat Foundation	S$9.2B	S$345M+ to healthcare; S$135M SingHealth (2026); MCH research
Bill Gates	Gates Foundation SG office	US$108B	Opened May 2025; co-leads PAA HHP (US$100M for SE Asia health)
Sukanto Tanoto	Tanoto Foundation	US$4B+	MRF S$5M/yr; CHaMP Centre; PAA HHP co-lead
Ray Dalio	Dalio Foundation SG	US$15B	Registered SG charity June 2023; Dalio Centre for Health (global)
Eduardo Saverin	Saverin Foundation	US$43B	Registered Sept 2023; grants to healthcare and education
Laurence Moh (estate)	Moh Family Foundation	Not disclosed	S$22.4M (75.1% to health)
Tsao family	Tsao Family Office	Not disclosed	Impact investing; Tsao Foundation for ageing; Duke-NUS

1.8.2 Emerging Opportunities

- **AJ Capital Singapore** (Abhinav Jhunjhunwala): Reportedly launching a **US$100 million fund for healthcare and education in Asia** — potentially relevant to UNFPA
- **Widjaja family** (Sinar Mas): MAS-licensed SFO; conglomerate with healthcare interests in Indonesia
- **Wee family** (UOB): Singapore's largest SFO (US$5–7B); UOB Foundation launching 2026

1.8.3 Access Strategy

Family offices are private entities. Engagement requires intermediaries: - **AVPN**: Network access to 700+ members including FOs - **CFS**: DAF structuring for FO phi-

lanthropy - **PAA**: High-level convening (Gates, Tanoto, Temasek in HHP Community) - **UBS / DBS / OCBC Private Banks**: Philanthropy advisory for FO clients - **PTIS uptake is slow** (only 9 applications by Aug 2024) — opportunity to help FOs structure overseas health giving

---

1.9 NEGATIVE LIST: PROMINENT SINGAPORE FOUNDATIONS NOT RECOMMENDED FOR UNFPA ENGAGEMENT

The following foundations are significant players in Singapore's philanthropic landscape but are **not recommended for UNFPA SRHR engagement** due to mandate misalignment, domestic-only focus, or structural incompatibility.

1.9.1 Government-Linked Entities with Incompatible Mandates

Tote Board (Singapore Totalisator Board) Statutory body distributing S$183.2 million annually (FY2023) from gambling proceeds across arts, community development, education, health, social service, and sports. Despite its health grants (Tote Board Community Health Fund, Tote Board Better Health Fund), Tote Board is **exclusively domestic** — it funds Singapore-based programmes only, with no international grant-making mandate. Not a realistic partner for UNFPA's cross-border resilience work.

GIC (Government of Singapore Investment Corporation) Singapore's sovereign wealth fund (estimated USD 700 billion+ AUM). GIC has a **purely commercial investment mandate** with some ESG integration. It does not make philanthropic grants and is structurally unable to fund development programmes. Cross-reference UNFPA-R-03 for detailed analysis.

Singapore International Foundation (SIF) Government-linked foundation supporting Singapore expertise sharing with developing countries. Focus on volunteerism, knowledge exchange, and people-to-people diplomacy — not grant-making for health programmes. Could serve as a soft diplomatic connector but is not a funder.

1.9.2 Corporate Foundations with Non-Health Mandates

Foundation	Primary Focus	Why Not UNFPA
Keppel Care Foundation	Environment, education, arts, underprivileged (S$4.8M in 2024)	No health or international SRHR mandate; focus on dementia, kidney health, wildlife — none aligned with UNFPA

Foundation	Primary Focus	Why Not UNFPA
OCBC #OCBCCares	Vulnerable communities, environment (mangrove restoration)	Social uplift and climate focus; no international health programme; "Healthcare With Minds" is domestic mental health only
UOB Heartbeat / UOB Foundation	Art, children, education	No health mandate whatsoever; children focus is arts-based, not health-based; new Foundation (operational 2026) will focus on scholarships, digital learning, financial literacy
Mapletree CSR Programme	Arts, education, environment, healthcare (S$41.3M lifetime)	Healthcare pillar exists but is domestic and small-scale; primary identity is arts patronage (National Arts Council Patron of the Arts Award since 2012)
Singtel Touching Lives Fund	Special education for children with special needs (S$58M+ lifetime)	Highly specialised mandate — SPED schools only; no maternal/reproductive health; no international scope
CapitaLand Hope Foundation	Education, health, well-being for children/youth/seniors (S$64M+ lifetime)	Health component exists but focused on community resilience and social inclusion, not SRHR; could be a marginal connector but not a funder

1.9.3 Family/Private Foundations with Education-Only Mandates

Foundation	Primary Focus	Why Not UNFPA
Kuok Foundation	Education and poverty alleviation through education (est. 1970, Kuok family)	Purely scholarship and education-focused; no health programme; Singapore activities limited to university scholarships

Foundation	Primary Focus	Why Not UNFPA
Wilmar International CSR	Education (70+ schools), community welfare, sustainability (NDPE policy)	CSR focused on plantation communities and rural education; ~US$10M annual CSR budget but directed at operational communities, not health programming; palm oil sector reputational considerations

1.9.4 Why This List Matters

The LKYSPP team will inevitably encounter these organisations in Singapore's philanthropic networks. Understanding why they are **not** appropriate UNFPA targets prevents wasted engagement effort and avoids the risk of approaching foundations that will either decline or redirect to inappropriate channels. The team's engagement bandwidth should be concentrated on the Tier 1–3 organisations profiled above.

1.10 ENGAGEMENT STRATEGY MATRIX

Entity	Engagement Type	Realistic Scale	Access Pathway
PAA HHP Community	Co-funder / programme partner	US$10–50M (within US$100M pool)	Temasek Trust, PAA Secretariat
Temasek Foundation	Anchor funder / co-investor	S$5–20M	Temasek Trust, direct approach via LKYSPP
Tanoto Foundation	Research partner / co-funder	S$3–5M (via MRF or CHaMP)	Direct approach; SingHealth Duke-NUS
Quantedge (QAI)	Co-funder via HHP	US$5–15M	Via PAA HHP Community
DBS Foundation	Grant funder / SE partner	SGD 50K–250K per grant	DBS Foundation open call
CFS	Channelling vehicle for DAFs	S$2–10M/year	Direct approach; family office referrals
AVPN	Network access / convening	N/A (connector)	Membership; annual conference
Lee Foundation	Major health grant	S$5–20M	SingHealth connection; formal proposal

Entity	Engagement Type	Realistic Scale	Access Pathway
KKH	Clinical / research partner	N/A (in-kind)	SingHealth Duke-NUS network
WAH Foundation	Implementation model	N/A (knowledge)	Direct approach
Khoo Teck Puat Foundation	Major health grant / research	S$10–50M	SingHealth Duke-NUS; Ms Mavis Khoo
UBS Optimus Foundation SG	Co-funder / UHNW connector	S$5–15M	UBS private banking
Babes Pregnancy Crisis	Adolescent SRHR partner	N/A (in-kind)	Direct approach
Mount Alvernia Hospital	Maternal health / midwifery partner	N/A (in-kind)	Direct; WAH Foundation connection

---

1.11 IMPLICATIONS FOR THE LKYSPP TEAM

1. **The PAA Health for Human Potential Community is the priority target**: With US$100 million committed by 2030, co-led by foundations already aligned with UNFPA's MNCHN mandate, and explicitly focused on Southeast Asia, this is the single most realistic large-scale funding pathway. The LKYSPP team should frame its PPP recommendation to integrate with the HHP Community's Collective Impact Framework.

2. **Temasek Foundation and Tanoto Foundation are the anchor bilateral relationships**: Both have dedicated maternal/child health programmes, significant capital (S$100M endowment and S$5M/year MRF respectively), and Singapore government credibility. Building relationships with these two foundations should precede broader engagement.

3. **CFS is the simplest channel for initial funding flows**: For a rapid pilot or proof-of-concept, structuring a donor-advised fund at CFS that can receive family office and foundation contributions toward SRHR-resilience programming is the lowest-barrier instrument.

4. **The Moh Family Foundation is an under-explored opportunity**: With 75.1% of its S$22.4 million going to health and no established SRHR portfolio, there may be space to shape a new funding relationship — particularly given the Foundation's recent incorporation (2021) and appetite for strategic giving.

5. **Operational partnerships with KKH and WAH Foundation demonstrate Singapore's existing maternal health export capability**: The WAH Foundation's midwife training model — Singapore clinical expertise deployed to Southeast Asian communities — is a concrete proof-of-concept for the kind of cross-border SRHR-resilience programming the LKYSPP team is designing.

1.12 SOURCES AND EVIDENCE NOTES

- Soristic Impact Collective: "Singapore's Biggest Philanthropic Organisations 2025" (FY2024 data); "Singapore's Biggest Philanthropic Organisations 2024" (FY2023 data)
- Temasek Foundation: Media release, "Temasek Foundation Launches Richard Magnus Endowment" (5 June 2023); IMCWH programme page
- Tanoto Foundation: "Tanoto Foundation Awards First Medical Research Grants of S$5M" (4 July 2024); "TF Centre for CHaMP" announcement
- Philanthropy Asia Alliance: Media release, "PAA Launches Two New Communities" (5 May 2025)
- DBS Foundation: "DBS Foundation partners KidSTART Singapore" (September 2025); Grants page
- Community Foundation of Singapore: Annual reports; "About CFS" pages
- AVPN: "About AVPN" pages; capital mobilisation reports
- KK Women's and Children's Hospital: "KKH to Transform Population Health" (5 October 2024)
- WAH Foundation: "10 Years of WAH"; Midwife College Training page; KKH partnership page
- Commissioner of Charities: Annual Report 2024; Charity Portal (charities.gov.sg)
- MCCY: Charities statistics and publications
- MAS: "Singapore Asset Management Survey 2022"; Family office registration data
- Charities Aid Foundation: World Giving Index 2024
- Singapore Budget 2025: Overseas Humanitarian Assistance Tax Deduction Scheme; SG Gives Matching Grant
- Estate of Khoo Teck Puat / SingHealth: "SingHealth gets $135m donation from Khoo Teck Puat estate" (January 2026); Givepedia profile
- UBS Optimus Foundation: 2024 Annual Review; OECD Development Co-operation Profile
- FairPrice Foundation: Annual Report 2024; "Start Strong, Stay Strong" programme launch (September 2024)
- Mount Alvernia Hospital: Year in Review 2024; Outreach Team programme descriptions
- Babes Pregnancy Crisis Support: SupportGoWhere listing; MOH Parliamentary reply on support for vulnerable pregnant women
- Tsao Foundation: Official website; Duke-NUS CARE partnership; ILC Singapore
- MAS: Speech by Deputy Chairman Chee Hong Tat at Global-Asia Family Office Summit (September 2024; September 2025) — confirmed 2,000+ SFOs by end-2024

Evidence quality rating: Strong on foundation-level data (annual reports, audited financial data via Soristic, official programme announcements). Moderate on family office impact investment appetite (survey-based estimates). Weak on whether

Singapore-based philanthropy has been successfully mobilised at scale for international SRHR programming — the PAA HHP Community (May 2025) is the first major attempt, and outcomes data does not yet exist.

Chapter 3

Singapore-Based Health Foundations: A Comprehensive Directory for UNFPA Partnership Development

Prepared for: LKYSPP Policy Innovation Lab — UNFPA Challenge B: PPP for Climate and Humanitarian Resilience **Date**: April 2026 **Classification**: Working document — not for external distribution without review **Parent document**: UNFPA-R-05 (Singapore-Based Foundations and Charities Directory)

3.1 TABLE OF CONTENTS

1. Introduction and Methodology
2. Singapore's Philanthropic Landscape — Structural Overview
3. Tier 1: Direct Maternal and Child Health Funders
    - 3.1 Temasek Foundation
    - 3.2 Tanoto Foundation
    - 3.3 Quantedge Advancement Initiative
    - 3.4 DBS Foundation
4. Tier 2: Significant Health Givers with Potential Alignment
    - 4.1 Lee Foundation
    - 4.2 Moh Family Foundation
    - 4.3 Low Tuck Kwong Foundation
    - 4.4 Shaw Foundation
    - 4.5 The Ngee Ann Kongsi
5. Tier 3: Ecosystem Enablers and Intermediaries
    - 5.1 Community Foundation of Singapore (CFS)
    - 5.2 Lien Foundation
    - 5.3 AVPN (Asian Venture Philanthropy Network)

- 5.4 Philanthropy Asia Alliance (PAA)

6. Tier 4: Civil Society and Operational Charities
   - 6.1 AWARE Singapore
   - 6.2 KK Women's and Children's Hospital (KKH)
   - 6.3 WAH Foundation
   - 6.4 Singapore Children's Society
   - 6.5 Club Rainbow Singapore
   - 6.6 KidSTART Singapore
   - 6.7 Ishk Tolaram Foundation
   - 6.8 Octava Foundation
7. Cross-Cutting Analysis
8. The Family Office Layer
9. Negative List — Foundations Not Recommended for UNFPA Engagement
10. Strategic Engagement Recommendations for UNFPA
11. Conclusion

- Appendix A: Foundation Quick-Reference Table
- Appendix B: Methodology and Data Sources

3.2 CHAPTER 1: INTRODUCTION AND METHODOLOGY

3.2.1 Purpose

This report provides a comprehensive directory and strategic analysis of Singapore-based foundations, charities, and philanthropic intermediaries relevant to maternal health, reproductive health care, and children's health. It is designed to support the LKYSPP Policy Innovation Lab team in identifying realistic funding partners, co-investors, and implementing allies for the UNFPA Challenge B — Public-Private Partnership for Climate and Humanitarian Resilience.

The report serves a specific practical function: to provide the team with pitch-ready briefings on each potential partner, including verified financial data, programme priorities, governance structures, access pathways, and an honest assessment of alignment with UNFPA's mandate.

3.2.2 Scope

The directory covers: - **Private philanthropic foundations** registered in Singapore (family foundations, corporate foundations, community foundations) - **Government-linked philanthropic entities** (Temasek Trust ecosystem, Tote Board) - **Philanthropic intermediaries and networks** (AVPN, PAA, CFS) - **Civil society organisations** with operational programmes in maternal, reproductive, or children's health - **Hospital-based philanthropic funds** (KKH, NUH Children's Fund)

The directory does not cover: bilateral government donors (covered in UNFPA-R-03), multilateral development finance institutions (covered in UNFPA-R-03), or religious charities without specific health programmes.

3.2.3 Methodology

This report draws on the following publicly available sources:

1. **Soristic Impact Collective**: "Singapore's Biggest Philanthropic Organisations" reports (2024 and 2025 editions), which track disbursements by 117–126 organisations based on audited financial statements filed with the Accounting and Corporate Regulatory Authority (ACRA) and the Commissioner of Charities (COC)
2. **Commissioner of Charities**: Annual Reports (2022–2024) and the Charity Portal registry (charities.gov.sg)
3. **Foundation annual reports and websites**: Direct data from Temasek Foundation, Tanoto Foundation, Quantedge Foundation, DBS Foundation, Lee Foundation, Lien Foundation, CFS, and others
4. **AVPN and PAA**: Member databases, programme announcements, summit proceedings
5. **Academic and media sources**: Published research on Singapore philanthropy, media coverage of foundation launches and major gifts
6. **Government sources**: MAS data on family offices and AUM; MCCY charities statistics; Budget 2025 announcements on philanthropic tax incentives

Limitations: This report relies on publicly available data. Private foundation strategies, internal funding pipelines, and family office investment mandates are not publicly disclosed. The Soristic reports are the most comprehensive public data source but track only organisations above certain disbursement thresholds. Smaller foundations and informal giving channels are not captured. All financial data is reported in Singapore Dollars (SGD) unless otherwise noted.

3.2.4 Classification Framework

Foundations are classified into four tiers based on their relevance to UNFPA's SRHR-resilience agenda:

Tier	Definition	Engagement Approach
Tier 1	Direct funders of maternal, reproductive, or child health programmes	Priority partnership development
Tier 2	Significant health givers whose current portfolios could accommodate SRHR	Targeted proposal development
Tier 3	Intermediaries and networks that channel or connect capital	Platform and network engagement
Tier 4	Operational charities with programme expertise	Implementation and knowledge partnerships

3.3 CHAPTER 2: SINGAPORE'S PHILANTHROPIC LANDSCAPE — STRUCTURAL OVERVIEW

3.3.1 Scale and Growth

Singapore's philanthropic sector has grown significantly over the past decade. The Soristic 2025 report — the most comprehensive annual tracking of Singapore philanthropy — identified 126 philanthropic organisations with total disbursements of S$419 million in FY2024, compared to 117 organisations disbursing S$431 million in FY2023. The apparent decline in total giving is misleading: the FY2023 figure was inflated by the Low Tuck Kwong Foundation's exceptional S$127.6 million disbursement (approximately 30% of the total). Excluding that outlier, underlying giving grew by approximately 38% year-on-year.

The top 10 organisations accounted for S$316 million — 75% of total tracked giving. Five of the top 10 are family-affiliated, two are corporate foundations, two are donor-advised fund sponsors, and one is a clan-based organisation. Forty-two organisations disbursed over S$1 million each.

Singapore is ranked 3rd globally on the 2024 World Giving Index (Charities Aid Foundation), up from 22nd the previous year — its highest ranking ever. This reflects both increased individual giving and the maturation of institutional philanthropy.

3.3.2 Regulatory Architecture

Singapore's charity sector operates under the Charities Act (Cap. 37), administered by the Commissioner of Charities (COC) within MCCY. Key regulatory features:

Registration: Any organisation established for exclusively charitable purposes must register with the COC. Registered charities enjoy income tax exemption and property tax exemption on premises used exclusively for charitable purposes.

Sector Administrators: Five government agencies serve as Sector Administrators (SAs) for charities in their respective domains: - Ministry of Health (MOH) — health charities - Ministry of Education (MOE) — education charities - Ministry of Social and Family Development (MSF) — social welfare charities - People's Association (PA) — community charities - Sport Singapore — sports charities

Charities that do not fit neatly into these sectors are regulated directly by the COC.

Institutions of a Public Character (IPCs): Charities approved as IPCs can issue tax-deductible receipts to donors. The current tax deduction rate is 250% — meaning a S$100 donation generates S$250 in tax deductions. This rate applies through 31 December 2026.

Overseas Humanitarian Assistance Tax Deduction Scheme (2025–2028): Budget 2025 introduced a pilot scheme offering 100% tax deduction for overseas cash donations made through designated charities addressing emergency humanitarian needs. This is significant for UNFPA's international mandate: it creates, for the first time, a structured tax incentive for Singapore-based donors to fund international humanitarian health programmes.

SG Gives Matching Grant: The government provides dollar-for-dollar matching for donations to national social and community programmes through the Community Chest, President's Challenge, and the Collective for a Stronger Society, with up to S$250 million in matching funds from 1 January 2025.

Tote Board Enhanced Fund-Raising Programme: Eligible charities receive dollar-for-dollar matching support from the Tote Board for qualifying fundraising projects.

3.3.3 The Health Philanthropy Sub-Sector

Health is one of Singapore's most significant areas of philanthropic giving, but the sub-sector is dominated by hospital-directed donations rather than programmatic health funding. The largest health-related gifts in recent years have been directed to SingHealth Duke-NUS Academic Medical Centre (Lee Foundation S$50 million, Ngee Ann Development S$40 million), KK Women's and Children's Hospital (S$30 million+ in centenary pledges), and medical research (Tanoto Foundation MRF).

Within the health sub-sector, maternal and reproductive health receives a fraction of total giving. The Moh Family Foundation (75.1% of grants to health) is the most health-concentrated major funder, but its portfolio spans general health rather than targeting SRHR specifically. The most dedicated SRHR funding comes from Temasek Foundation (Richard Magnus Endowment) and Tanoto Foundation (MRF and CHaMP Centre).

A critical gap: There is no Singapore-based foundation with an explicit focus on reproductive health, family planning, or sexual and reproductive health and rights (SRHR) as understood in the UNFPA mandate. Maternal and child health receives attention; reproductive health and SRHR more broadly do not. This gap represents both a challenge (no existing champion) and an opportunity (first-mover advantage for whoever frames the agenda).

3.3.4 Wealth and Family Offices

Singapore's wealth management sector — S$5.4 trillion in assets under management (MAS, 2022) — is the financial backdrop to its philanthropy. An estimated over 2,000 single-family offices (up from ~1,400 in 2023) (SFOs) are registered under MAS 13O/13U tax incentive schemes. These schemes require qualifying FOs to invest in Singapore-domiciled assets and increasingly encourage local philanthropic activity.

Industry surveys (Campden Wealth, UBS/PwC) suggest 10–20% of Singapore FOs have genuine impact investing appetite — defined as willingness to accept below-market returns for social/environmental outcomes. Climate is the most common impact theme; health/SRHR is much less common. Accessing family offices requires intermediaries: AVPN, CFS, private bank philanthropy advisory teams (DBS Private Bank, UOB, OCBC), or the Philanthropy Asia Alliance.

3.3.5 Government as Catalyst

A distinctive feature of Singapore's philanthropic landscape is the government's active role as a catalyst — not just regulator — of private giving. Through matching

grants (SG Gives, Tote Board EFR), tax incentives (250% IPC deduction, overseas humanitarian deduction), and convening platforms (PAA, Singapore International Foundation), the government systematically leverages private capital for social outcomes. This creates opportunities for UNFPA: a well-structured proposal that aligns with government priorities (ASEAN health resilience, Singapore's regional leadership role) can access not just private philanthropy but government co-funding.

3.4 CHAPTER 3: TIER 1 — DIRECT MATERNAL AND CHILD HEALTH FUNDERS

These four foundations have dedicated programmes, endowments, or grant mechanisms specifically targeting maternal, reproductive, or children's health outcomes.

3.4.1 3.1 Temasek Foundation

Type: Government-linked philanthropic foundation (part of the Temasek ecosystem) **Established**: 2007 (consolidated from earlier Temasek community entities) **Governance**: Board appointed through Temasek Trust; chaired by Mr Lim Swee Say (former Minister) **Total giving**: Not publicly disclosed as a single figure; programmes span liveability, health, education, and international cooperation **Website**: temasekfoundation.org.sg

3.4.1.1 Maternal and Child Health Programmes

The Richard Magnus Endowment (S$100 million) Launched on 5 June 2023 at Punggol Polyclinic, this is the single largest dedicated maternal and child health philanthropic commitment in Singapore's history. The endowment is named in honour of the late Retired Judge Richard Magnus (1945–2022), who served as founding chairman of Temasek Cares and spent 13 years at Temasek Foundation championing new social models of care. The endowment supports: - Antenatal and postnatal care programmes for mothers and babies - Initiatives for children's health and well-being, including research, awareness, prevention, and intervention - Physical, mental, and social well-being across the life course

The endowment builds on the **Integrated Maternal and Child Wellness Hub (IMCWH)** — a first-of-its-kind integrated screening service co-developed by Temasek Foundation, KK Women's and Children's Hospital (KKH), and SingHealth Polyclinics. The initial pilot at Punggol Polyclinic, funded by a S$2.5 million+ Temasek Foundation grant starting in July 2019, provided integrated developmental screening for children under three alongside maternal emotional health screening. Within two years, over 14,000 screenings were conducted. The model has since expanded to Bedok, Tampines, and Sengkang polyclinics, with the Ministry of Health targeting rollout to 14 polyclinics by 2025.

Public Health Innovations Grants Temasek Foundation runs open calls for proposals supporting translational implementation and pilot-testing of innovative health

technologies, protocols, and business models. These grants fund ideas addressing healthcare and environmental challenges affecting the Singapore population. Contact: liveability@temasekfoundation.org.sg.

Health for Human Potential Community (via PAA) Through its parent entity Temasek Trust, Temasek Foundation is a co-lead of the PAA Health for Human Potential (HHP) Community, launched in May 2025 with a US$100 million funding target by 2030, focused on MNCHN and infectious diseases in Southeast Asia.

3.4.1.2 Assessment of UNFPA Alignment

Alignment strength: Very strong **Rationale**: The Richard Magnus Endowment's explicit focus on maternal and child health, combined with Temasek Foundation's regional credibility, government backing, and role in the PAA HHP Community, makes it the single most aligned major funder in Singapore. The IMCWH model demonstrates willingness to fund innovative, integrated care models — precisely the kind of cross-sector approach UNFPA's resilience PPP requires. **Realistic funding scale**: S$5–20 million over 3–5 years, structured as a programme grant or endowment draw **Access pathway**: Temasek Trust; PAA Secretariat; LKYSPP institutional relationships with the Temasek ecosystem **Key risk**: Government-linked entities are politically cautious. Any UNFPA engagement must be carefully framed to avoid politically sensitive areas (abortion, comprehensive sexuality education) that could create reputational risk for a Singapore government-linked foundation.

3.4.2 3.2 Tanoto Foundation

Type: Private family foundation **Established**: 1981 (by Sukanto Tanoto and Tinah Bingei Tanoto) **Headquarters**: Singapore (with operations in Indonesia, China) **Focus areas**: Education, medical research, community empowerment **Total giving to medical research since 2009**: S$20 million+ **Website**: tanotofoundation.org

3.4.2.1 Maternal and Child Health Programmes

Tanoto Foundation Medical Research Fund (MRF) Launched in 2023, the MRF is the first private philanthropic medical research fund in Singapore. It provides up to S$5 million per year for research addressing Asia-prevalent diseases across five focus areas: diabetes, oncology, maternal and child health, cardiology, and infectious diseases.

In its inaugural 2024 round — selected from over 100 applications — the MRF funded three projects: 1. **Maternal fertility decline**: Professor Brian Kennedy (National University of Singapore) — research into ovarian aging, aiming to identify causes of fertility decline and investigate safer reproductive interventions to preserve ovarian function, extend fertility, and mitigate menopause-related complications 2. **Neonatal allergies**: Associate Professor Ashley St John (Duke-NUS Medical School) — investigating maternal influences on neonatal allergies to develop prevention therapies 3.

Cardiovascular risk in diabetes: Associate Professor Rinkoo Dalan (Tan Tock Seng Hospital) — colchicine for cardiovascular prevention in diabetes

The application process for the MRF 2025 cycle opened in September 2024. Research proposals may cover basic, translational, or clinical research.

TF Centre for Child and Maternal Health Programmes (CHaMP) Tanoto Foundation donated S$3 million to establish the TF Centre for CHaMP at KK Women's and Children's Hospital. The centre positions KKH as a leader in early childhood and maternal health through integrated research, clinical innovation, and community programmes.

Medical Philanthropy Forum In July 2024, Tanoto Foundation hosted its inaugural Medical Philanthropy Forum, convening researchers, clinicians, and philanthropists to discuss bridging funding gaps in medical research. This signals a broader ambition to catalyse a culture of medical philanthropy in Singapore — beyond its own giving.

3.4.2.2 Assessment of UNFPA Alignment

Alignment strength: Strong (particularly on research and evidence) **Rationale**: The MRF's explicit maternal and child health focus, the CHaMP Centre at KKH, and the Foundation's stated commitment to Asia-prevalent diseases create direct alignment with UNFPA's evidence and programme needs. The Foundation's Indonesian operations add regional credibility. **Realistic funding scale**: S$3–5 million over 3 years (via MRF grants or CHaMP-linked programmes) **Access pathway**: SingHealth Duke-NUS network; KKH research leadership; direct approach to Tanoto Foundation's Singapore office **Key risk**: The MRF is research-focused, not programme-focused. UNFPA engagement would likely need to be framed as evidence generation or translational research rather than direct service delivery.

3.4.3 3.3 Quantedge Advancement Initiative

Type: Private foundation (grantmaking charity) **Established**: 2020 (Quantedge Foundation established earlier; QAI is the international arm) **Parent**: Quantedge Capital (quantitative hedge fund) **Focus areas**: Global health and development; climate change action **Geographic scope**: Southeast Asia and beyond **Awards**: Charity Transparency Award 2022, 2023, 2024 (Charity Council) **Website**: quantedge.org

3.4.3.1 Health and Development Programmes

PAA Health for Human Potential (HHP) Community — Co-Lead Quantedge Advancement Initiative is one of five co-leads (alongside the Gates Foundation, Institute of Philanthropy, Tanoto Foundation, and Temasek Foundation) of the HHP Community, launched at the Philanthropy Asia Summit on 5 May 2025. The Community targets US$100 million by 2030 with two objectives: (1) reducing preventable deaths and disease burdens across Southeast Asia, focusing on maternal, newborn, and child health and nutrition (MNCHN), and (2) tackling infectious diseases.

The HHP Community's Collective Impact Framework — co-developed by its leads — defines a common mission, scopes the challenge, and sets clear metrics and timelines for progress. The Community welcomes new partners and aims to build a sustained, long-term coalition.

Nutrition International — Philippines QAI supports Nutrition International's "Bridging the Fortification Gap in the Philippines" project, which aims to improve the nutritional status and well-being of women and adolescents. This is a direct SRHR-adjacent investment in a climate-vulnerable ASEAN country.

Governance and Transparency Quantedge Foundation has won the Charity Transparency Award three consecutive years (2022–2024), indicating strong governance standards — an important factor for UNFPA partnership due diligence.

3.4.3.2 Assessment of UNFPA Alignment

Alignment strength: Very strong **Rationale**: QAI's co-leadership of the HHP Community places it at the centre of the most aligned funding coalition in Singapore. Its focus on global health and development, combined with Southeast Asia geographic scope and demonstrated investment in women's nutrition, creates near-perfect alignment with UNFPA's SRHR-resilience mandate. **Realistic funding scale**: US$5–15 million over 5 years (within the HHP Community framework) **Access pathway**: Via PAA HHP Community engagement; AVPN network **Key risk**: Quantedge is a relatively small team; its philanthropic capacity is significant but its operational bandwidth for partnership management may be limited. Engagement should be structured through the HHP Community mechanism rather than bilateral.

3.4.4 3.4 DBS Foundation

Type: Corporate foundation (bank-linked) **Established**: 2014 **Parent**: DBS Group Holdings (Southeast Asia's largest bank by assets) **FY2024 commitment**: S$102.6 million (top giver in Soristic 2025) **Long-term pledge**: S$1 billion over the next decade **Focus areas**: Essential needs for the underprivileged; financial and digital inclusion; social enterprise support **Website**: dbs.com/foundation

3.4.4.1 Maternal and Child Health Programmes

KidSTART Pregnant Mum & Baby Nutrition Programme (September 2025) DBS Foundation partnered with KidSTART Singapore to launch a programme targeting pregnant mothers from lower-income households. The initiative provides: - Nutrition support through pregnancy and early infancy - Mental wellness workshops (delivered by Singapore Association of Mental Health) - Financial literacy training (delivered by SpedGrow, a 2024 DBS Foundation grant recipient)

This programme directly addresses the social determinants of maternal and child health in Singapore's most vulnerable communities.

Social Enterprise Grant Programme DBS Foundation's flagship grant programme provides SGD 50,000–250,000 to social enterprises and SMEs creating impact for vulnerable communities across Asia (China, Hong Kong, India, Indonesia, Singapore, Taiwan). Eligible businesses must demonstrate impact in areas including healthcare and nutrition. In 2024, 22 social entrepreneurs were selected from 1,500+ applicants, receiving S$4.5 million total. Past recipients include Project Baala (sustainable menstrual solutions for women and girls in rural India).

Scale of Commitment DBS Foundation's S$102.6 million commitment in 2024 makes it the single largest philanthropic disburser in Singapore. The bank also pledged 1.5 million employee volunteer hours over the next decade. The foundation supports 16 new multi-year programmes and 22 Businesses for Impact across Asia.

3.4.4.2 Assessment of UNFPA Alignment

Alignment strength: Moderate **Rationale**: DBS Foundation's KidSTART partnership demonstrates direct interest in maternal and child nutrition. The SE Grant Programme could fund SRHR-related social enterprises. However, DBS Foundation's focus is primarily on financial inclusion and community resilience in a domestic Singapore context, with Asia-wide SE grants as a secondary channel. **Realistic funding scale**: SGD 50,000–250,000 per SE grant; larger programmatic partnership would require bespoke engagement **Access pathway**: DBS Foundation open grant calls (annual); DBS Private Bank philanthropy advisory for family office introductions **Key risk**: Corporate foundations operate within brand and compliance frameworks. SRHR-specific programming may face internal sensitivities at a publicly listed bank.

3.5 CHAPTER 4: TIER 2 — SIGNIFICANT HEALTH GIVERS WITH POTENTIAL ALIGNMENT

These foundations are major health funders but do not currently have dedicated maternal, reproductive, or children's health programmes. Their existing portfolios — particularly in medical research, hospital support, and community health — create potential alignment that could be developed through targeted engagement.

3.5.1 4.1 Lee Foundation

Type: Private family foundation **Established**: 1952 (by Lee Kong Chian, founder of OCBC Bank) **Total assets**: S$13.6 billion — the largest foundation in Singapore by far **FY2024 disbursement**: S$33.2 million **Focus areas**: Education, healthcare, arts and heritage, disaster relief **Website**: Not publicly maintained; information via Givepedia and annual filings

3.5.1.1 Health-Related Giving

Lee Foundation's health philanthropy is substantial but broad: - **S$50 million gift to SingHealth Duke-NUS Academic Medical Centre** — the single largest private

gift to a Singapore medical institution, supporting healthcare innovation, discovery research, and pilot grants - **Lee Foundation Overseas Medical Bursary** — provides bond-free financial aid to Singaporeans studying medicine overseas - Regular donations to hospitals in Singapore and the region

Lee Foundation has been a consistent donor to the National University of Singapore since 1987, awarding approximately 240 scholarships to date. Its giving spans education, healthcare, arts, and community — it is a generalist foundation with significant health capacity rather than a health-focused foundation.

3.5.1.2 Assessment of UNFPA Alignment

Alignment strength: Moderate (high potential given asset base) **Rationale**: With S$13.6 billion in assets and a demonstrated willingness to make S$50 million+ health gifts, Lee Foundation has the capacity to make a transformative investment in SRHR-resilience. However, its historical giving pattern is institution-directed (hospitals, universities) rather than programme-directed. A proposal would need to be structured around institutional partnerships (e.g., funding an SRHR-resilience research programme at SingHealth Duke-NUS) rather than direct UNFPA programme funding. **Realistic funding scale**: S$5–20 million if structured as a named research programme or institutional gift **Access pathway**: SingHealth Duke-NUS leadership; NUS connections via LKYSPP **Key risk**: Lee Foundation is famously private and does not maintain a public website or open application process. Engagement requires warm introductions through institutional channels.

3.5.2 4.2 Moh Family Foundation

Type: Private family foundation **Established**: 2021 **Founders**: Family of the late Laurence Moh (furniture industry) **FY2024 disbursement**: S$22.4 million **FY2023 disbursement**: S$23.6 million **Grant allocation (FY2023)**: Health 75.1%, Community well-being 14.2%, Social welfare 8.7% **Website**: Not publicly maintained

3.5.2.1 Health-Related Giving

The Moh Family Foundation is the most health-concentrated major foundation in Singapore, with over three-quarters of its grants directed to health causes. Despite being incorporated only in 2021, it has rapidly become one of Singapore's top 10 philanthropic organisations. The Foundation supports health, community well-being, and social welfare internationally.

Specific grant recipients and programmes are not publicly disclosed in detail. The Foundation's rapid emergence and health concentration suggest a deliberate strategic focus, though the specific sub-areas within health (e.g., hospitals, research, community health, public health) are not transparently reported.

3.5.2.2 Assessment of UNFPA Alignment

Alignment strength: Moderate to strong (under-explored opportunity) **Rationale**: The Moh Family Foundation's 75.1% health allocation and recent incorporation make it potentially the most receptive major funder for a new SRHR-resilience portfolio. Unlike established foundations with fixed giving patterns, a foundation incorporated in 2021 may be actively defining its strategic priorities. The key question — unanswerable from public data — is whether the Foundation's health giving is directed primarily at Singapore domestic healthcare or includes international health and development. **Realistic funding scale**: S$5–15 million if health portfolio includes or could include international SRHR **Access pathway**: Limited public information; likely requires intermediary introduction via CFS, AVPN, or private bank advisory **Key risk**: Opacity. The Foundation does not maintain a public website or publish programme details. Engagement is speculative without insider knowledge of its strategic direction.

3.5.3 4.3 Low Tuck Kwong Foundation

Type: Private family foundation **Established**: December 2022 **Founder**: Low Tuck Kwong (founder and chairman of PT Bayan Resources, Indonesia-based coal mining) **FY2024 disbursement**: S$23.2 million **FY2023 disbursement**: S$127.6 million (exceptional; ~30% of total Singapore philanthropy that year) **Focus areas**: Education, healthcare **Website**: Not publicly maintained in detail

3.5.3.1 Health-Related Giving

The Low Tuck Kwong Foundation was the top giver in the Soristic 2024 report, disbursing an exceptional S$127.6 million in its first full year of operation — the largest single-year philanthropic disbursement ever recorded in Singapore's tracking history. The majority went to a S$101 million gift to the Lee Kuan Yew School of Public Policy for scholarships supporting public officers from Asia. Healthcare recipients include hospitals in Singapore and the region.

The Foundation's FY2024 disbursement of S$23.2 million suggests that the S$127.6 million was indeed a one-off launch-year commitment. The ongoing annual giving level is likely in the S$20–30 million range, which remains substantial.

3.5.3.2 Assessment of UNFPA Alignment

Alignment strength: Low to moderate **Rationale**: The Foundation's demonstrated interest in healthcare and its LKYSPP connection (via the S$101 million gift) create a potential touchpoint. However, the Foundation's health giving appears directed at hospitals rather than public health programmes. Its coal mining wealth source also creates potential reputational considerations for UNFPA partnership. **Realistic funding scale**: S$5–10 million if health portfolio can accommodate international public health **Access pathway**: LKYSPP institutional relationship (given the S$101 million gift); NUS leadership **Key risk**: Reputational due diligence required given

fossil fuel wealth origins. New foundation (est. 2022) with limited track record in health programme design.

3.5.4 4.4 Shaw Foundation

Type: Private family foundation **Established**: 1957 (by the Shaw brothers — Run Run Shaw and Runme Shaw) **FY2022 disbursement**: ~S$5 million (most recent publicly available figure) **Lifetime giving**: Over US$150 million **Focus areas**: Education, healthcare, arts and heritage, welfare **Website**: shaw.sg/shawfoundation

3.5.4.1 Health-Related Giving

The Shaw Foundation is one of Singapore's oldest philanthropic institutions. Funding comes from investments and prime properties donated by the Shaw family, including Shaw Centre. Key health giving: - **National Kidney Foundation**: The largest share of Shaw Foundation funding has gone to NKF - **Paediatric medical research**: Through the late Tan Sri Dr Runme Shaw's 19-year chairmanship of the Singapore Turf Club, proceeds were directed to cardiac, cancer, liver, and paediatric medical research - **Hospitals and associations for the disabled**: Regular support to healthcare institutions

3.5.4.2 Assessment of UNFPA Alignment

Alignment strength: Low to moderate **Rationale**: Shaw Foundation's paediatric research funding and long institutional history in health create potential alignment, but its annual disbursement (~S$5 million) is modest compared to other Tier 2 foundations, and its portfolio is well-established. The Foundation would be a supplementary rather than anchor funder. **Realistic funding scale**: S$500,000–2 million **Access pathway**: Formal proposal; NUS connections **Key risk**: Established giving patterns; limited appetite for new programmatic areas.

3.5.5 4.5 The Ngee Ann Kongsi

Type: Teochew clan-based philanthropic organisation **Established**: 1845 **FY2024 disbursement**: S$40.6 million **Focus areas**: Education, culture, healthcare, community **Website**: thengeeannkongsi.com.sg

3.5.5.1 Health-Related Giving

The Ngee Ann Kongsi is one of Singapore's most generous philanthropic organisations, with a particular emphasis on education and medical infrastructure: - **S$40 million to SingHealth** (via subsidiary Ngee Ann Development): Funded the Ngee Ann Kongsi Discovery Tower and auditorium at the SingHealth Duke-NUS Academic Medical Centre, supporting medical research and education in ageing, population health, and AI for healthcare - **S$12.5 million to NTU for Traditional Chinese**

Medicine (TCM) (October 2024): A five-year commitment to advance TCM education, fund scholarships and bursaries, support clinical training, and expand community outreach

The Ngee Ann Kongsi's health giving is primarily directed at medical education and infrastructure rather than programmatic health delivery.

3.5.5.2 Assessment of UNFPA Alignment

Alignment strength: Low **Rationale**: The Ngee Ann Kongsi's giving is directed at Singapore-based medical education and infrastructure. Its Teochew community mandate and education-first orientation make it an unlikely partner for international SRHR programming. However, its S$40 million SingHealth gift demonstrates that it can make very large health investments when aligned with institutional priorities. **Realistic funding scale**: Unlikely for UNFPA-specific programming **Access pathway**: SingHealth Duke-NUS; NTU connections **Key risk**: Mission misalignment — the Kongsi's mandate is to serve the Teochew community and Singapore education.

3.6 CHAPTER 5: TIER 3 — ECOSYSTEM ENABLERS AND INTERMEDIARIES

These organisations do not directly fund maternal or child health programmes but serve as critical channels, connectors, and platforms through which funding can be mobilised and partnerships structured.

3.6.1 5.1 Community Foundation of Singapore (CFS)

Type: Community foundation (donor-advised fund sponsor) **Established**: 2008 **FY2024 disbursement**: S$28.4 million **Lifetime donations raised**: S$353 million+ **Lifetime grants disbursed**: S$210 million+ **Website**: cf.org.sg

3.6.1.1 Role in the Philanthropic Ecosystem

CFS is Singapore's first and largest holder of donor-advised funds (DAFs). It operates as a cause-neutral foundation — it does not earmark funds for specific sectors but channels giving based on donor preferences. CFS manages due diligence for grant recipients, provides tax-efficient giving structures for donors, and increasingly facilitates international philanthropy.

CFS offers four categories of grants: programme grants (funding specific activities), operating grants, capacity-building grants, and emergency grants. Applications undergo evaluation based on alignment with donor intent and CFS due diligence criteria.

3.6.1.2 Relevance to UNFPA

CFS is the most practical channel for structuring Singapore-based donations toward UNFPA-related programming. A donor-advised fund at CFS could receive contributions from family offices, foundations, and individual donors, with CFS managing compliance and disbursement. This is the lowest-barrier funding instrument available.

CFS's growing international grant portfolio also positions it as a channel for the new Overseas Humanitarian Assistance Tax Deduction (2025–2028), which could incentivise Singapore-based donors to fund international SRHR work through CFS.

Access pathway: Direct approach; family office referrals; SBF Foundation network **Realistic role**: Channelling vehicle for S$2–10 million per year in aggregated donor giving

---

3.6.2 5.2 Lien Foundation

Type: Private family foundation **Established**: 1980 **FY2024 disbursement**: S$24.4 million **Focus areas**: Eldercare, palliative care, seniors' mental well-being (formerly also early childhood development) **Website**: lienfoundation.org

3.6.2.1 Profile

Lien Foundation concentrates at "two ends of life's spectrum" — eldercare and end-of-life care, having progressively exited early childhood development since 2022 (citing increased government spending in that space). It is one of Singapore's most internationally active foundations, having funded water, sanitation, and urban poor programmes in ASEAN countries.

Lien Foundation's approach is characterised by innovation-seeking, risk-tolerance, and willingness to fund unconventional models — qualities that distinguish it from more conservative Singapore foundations. Recent initiatives include the Air Master cardiopulmonary rehabilitation programme in partnership with AWWA, Ren Ci Hospital, St Luke's ElderCare, and Tan Tock Seng Hospital.

3.6.2.2 Relevance to UNFPA

Lien Foundation is not a direct SRHR funder, but its international orientation, ASEAN relationships, and innovation-oriented grantmaking philosophy make it a useful reference model and potential connector. Its exit from early childhood development may also signal availability of capital for new programmatic areas.

Access pathway: Direct approach; AVPN network **Realistic role**: Knowledge partner, connector to ASEAN civil society networks; potential co-funder if SRHR-resilience is framed as life-course innovation

---

3.6.3 5.3 AVPN (Asian Venture Philanthropy Network)

Type: Nonprofit membership network **Established**: 2011 **Headquarters**: Singapore **Membership**: 700+ organisations across 43 markets **Website**: avpn.asia

3.6.3.1 Profile

AVPN is Asia's largest social investment network, connecting philanthropists, impact investors, development organisations, and governments. Founded by Doug Miller (who also founded the European Venture Philanthropy Association), AVPN approaches social investment as a continuum of capital — grants, debt, and equity — to achieve social impact.

3.6.3.2 Health Initiatives

AVPN launched a **US$1 million pooled fund** to improve maternal, newborn, child health, and nutrition (MNCHN) in Southeast Asia. The network also convenes sessions on health equity, gender-lens investing, and climate-health intersections at its annual Global Conference.

3.6.3.3 Relevance to UNFPA

AVPN is the primary access point for engaging Singapore-based family offices and impact investors on health-related funding. Its membership network includes many of the foundations profiled in this report. The annual AVPN Global Conference is a high-value convening opportunity for relationship-building.

Access pathway: AVPN membership; conference participation **Realistic role**: Network access, deal flow facilitation, convening; not a direct funder

---

3.6.4 5.4 Philanthropy Asia Alliance (PAA)

Type: Multi-stakeholder philanthropy platform **Established**: 2022 (launched at first Philanthropy Asia Summit) **Parent**: Temasek Trust **Website**: philanthropyasiaalliance.org

3.6.4.1 Profile

The Philanthropy Asia Alliance is a Temasek Trust-linked platform that brings together Asia's major philanthropists, foundations, and development organisations to collaborate on high-impact challenges. PAA operates through thematic "Communities" — collaborative groups of funders, practitioners, and ecosystem partners working on shared missions.

3.6.4.2 The Health for Human Potential (HHP) Community

Launched on 5 May 2025 at the Philanthropy Asia Summit, the HHP Community is the most directly relevant funding mechanism for UNFPA's SRHR-resilience agenda in Singapore. Key details:

- **Objectives**: (1) Reduce preventable deaths and disease burdens in Southeast Asia, focusing on MNCHN; (2) Tackle infectious diseases
- **Community leads**: Gates Foundation, Institute of Philanthropy, Quantedge Advancement Initiative, Tanoto Foundation, Temasek Foundation
- **Funding target**: US$100 million by 2030
- **Approach**: Collective Impact Framework — common mission, scoped challenge, clear metrics and timelines
- **Summit context**: The 2025 Summit convened 1,000+ global and regional thought leaders, with President Tharman Shanmugaratnam and Bill Gates sharing perspectives on philanthropy's role in health and climate

Previously launched Communities include Blue Oceans, Sustainable Land Use, and Holistic & Inclusive Education (2024). The Just Energy Transition (JET) Community was launched alongside HHP in 2025.

3.6.4.3 Relevance to UNFPA

The PAA HHP Community is the single most important engagement target identified in this entire directory. Its objectives — reducing MNCHN-related preventable deaths in Southeast Asia — are directly aligned with UNFPA's mandate. The Community's co-leads include foundations already profiled as Tier 1 partners. The Collective Impact Framework approach means UNFPA could position itself as a technical partner or implementing agency rather than a funder, contributing expertise and programme infrastructure in exchange for access to the US$100 million capital pool.

Access pathway: Temasek Trust; PAA Secretariat; through any of the five Community leads **Realistic role**: Technical partner, programme co-designer, implementing agency within the HHP Community framework

---

3.7 CHAPTER 6: TIER 4 — CIVIL SOCIETY AND OPERATIONAL CHARITIES

These organisations operate programmes in maternal health, reproductive health, children's welfare, or women's rights. They are potential implementing partners, knowledge partners, or advocacy allies for UNFPA-linked programming — not funding sources.

3.7.1 6.1 AWARE Singapore

Type: Advocacy organisation (Company Limited by Guarantee) **Established**: 1985 **Full name**: Association of Women for Action and Research **Focus areas**: Gender

equality, women's rights, sexual and reproductive rights, workplace harassment, GBV **Website**: aware.org.sg

AWARE is Singapore's leading gender equality advocacy organisation. It operates the Sexual Assault Care Centre (SACC) — Singapore's first and only specialised care service for sexual violence survivors — and provides counselling, legal advice, and training to women. AWARE's advocacy extends to reproductive rights, including critiques of state population policies, advocacy for informed choice in family planning, and research on women's health policy.

AWARE's 2024–2025 advocacy includes responses to government policy on women's representation, the "motherhood penalty" in workplace advancement, and reproductive autonomy. The organisation is well-positioned as a knowledge partner on SRHR advocacy framing in the Singapore context — particularly given Singapore's cautious political environment around reproductive rights.

Relevance to UNFPA: Knowledge partner for SRHR advocacy strategy; research partner on women's health policy; potential co-convenor for SRHR policy discussions in Singapore.

3.7.2 6.2 KK Women's and Children's Hospital (KKH)

Type: Public hospital (SingHealth cluster) **Established**: 1924 (as Kandang Kerbau Hospital — celebrated centenary in October 2024) **Beds**: 830 **Specialisation**: Obstetrics and gynaecology, neonatology, paediatrics **Website**: kkh.com.sg

KKH is Singapore's largest public hospital specialising in healthcare for women and children. Its philanthropic profile surged in October 2024 when, at its centenary celebration (graced by President Tharman Shanmugaratnam), KKH announced 15 new population health programmes backed by S$30 million+ in philanthropic funding. These programmes target:

- **Metabolic health**: PELiCAN (Paediatrics & Endocrinology Life-Course Action Network)
- **Preterm birth prevention**: Preterm Pregnancy Prevention Programme
- **Community midwifery**: EMPOWER2 pilot — KKH nurses delivering personalised, evidence-based anticipatory care to new mothers in their homes (400 postnatal mothers in Kallang, Sengkang, Punggol, commencing early 2025)
- **Health literacy**: Community-based education programmes

KKH also hosts: - **SingHealth Duke-NUS Maternal and Child Health Research Institute (MCHRI)** — established 2021, conducting research across the maternal-child health spectrum - **Tanoto Foundation Centre for CHaMP** — S$3 million for child and maternal health programmes - **Temasek Foundation IMCWH** — integrated maternal and child wellness screening hub - **Kidz Horizon Appeal** — raised S$17 million+ over 20 years for children with chronic illnesses

Relevance to UNFPA: KKH is the anchor clinical and research institution for any Singapore-based maternal and child health initiative. Its partnership with WAH Foundation demonstrates cross-border training capability. The EMPOWER2 community

midwifery pilot is directly relevant to UNFPA's midwifery strengthening work. KKH's SingHealth Duke-NUS network provides access to Lee Foundation, Tanoto, and Ngee Ann Kongsi philanthropic relationships.

3.7.3 6.3 WAH Foundation

Type: Nonprofit organisation (registered in Singapore and Cambodia) **Established**: 2009 **Founder**: Christopher Wilson **Focus areas**: Water, healthcare, maternal health, midwifery training **Geographic focus**: Kampong Chhnang province, Cambodia **Website**: wahfoundation.org

WAH (Water and Healthcare) Foundation is the most concrete example of Singapore-based cross-border maternal health programming. Founded in 2009, WAH has partnered with KKH and Mount Alvernia Hospital Singapore since 2013 to train midwives and paediatric nurses in rural Cambodia.

Key achievements: - **400+ individuals trained** in midwifery and emergency infant care - **200+ midwives and paediatric nurses** trained across Kampong Chhnang province - **90% drop in maternal mortality** related to childbirth in the province - **Train-the-trainer model**: 10 Cambodian Core Trainers now deliver training in Khmer, enabling sustainability - **WAH Emergency Life Kits**: Designed in 2017 with KKH and Mount Alvernia Hospital to save mothers and infants in isolated rural communities during childbirth - **10 emergency midwife students** qualified through International University in Kampong Chhnang

WAH's model is directly relevant to UNFPA's work: it demonstrates that Singapore-based clinical expertise (via KKH) can be deployed to reduce maternal mortality in developing Asia through a train-the-trainer approach — exactly the kind of knowledge-transfer PPP the LKYSPP team is designing.

Relevance to UNFPA: Implementation model and proof-of-concept for Singapore-to-ASEAN maternal health partnership. Potential implementing partner for midwifery training components of a resilience PPP.

3.7.4 6.4 Singapore Children's Society

Type: Voluntary Welfare Organisation (VWO) **Established**: 1952 **FY2024 reach**: 20,187 children, youth, and families **Focus areas**: Child welfare, youth development, family support, mental health **Website**: childrensociety.org.sg

Singapore Children's Society is the nation's leading child welfare charity. As a designated KidSTART agency, it reaches children from low-income households — starting from pregnancy — with outreach covering nutrition, child development, and parent-child interaction. Services include: - Sunbeam Place: Residential care for children aged 2–21 - Counselling and casework for families - Flourishing Minds: Mental health literacy programme - Community-based programmes across multiple centres

Relevance to UNFPA: Potential implementing partner for child health and early childhood programmes in Singapore. Its KidSTART role provides a direct connection to the government's early childhood infrastructure.

3.7.5 6.5 Club Rainbow Singapore

Type: Voluntary Welfare Organisation **Focus**: Children and youth with chronic illnesses **Website**: clubrainbow.org

Club Rainbow supports and empowers children with chronic illnesses and their families through holistic services — medical, educational, psychosocial, and financial support. It serves as a supplementary care network for families navigating long-term paediatric health challenges.

Relevance to UNFPA: Limited direct alignment, but relevant as part of the broader children's health ecosystem in Singapore.

3.7.6 6.6 KidSTART Singapore

Type: Government-linked programme **Focus**: Early childhood development for low-income families (children under 6) **Website**: kidstart.sg

KidSTART is an MSF-linked programme providing holistic, age-appropriate support to families from pregnancy onward — including nutrition guidance, child developmental screening, and parent-child interaction coaching. It operates through designated agencies (including Singapore Children's Society) and partners with DBS Foundation on the Pregnant Mum & Baby Nutrition Programme.

Relevance to UNFPA: Demonstrates Singapore's government-philanthropic partnership model for early life intervention. The DBS Foundation partnership is a live example of corporate philanthropy funding maternal-child health through government channels.

3.7.7 6.7 Ishk Tolaram Foundation

Type: Private family foundation (Company Limited by Guarantee, charity status) **Established**: 2017 **Parent**: Tolaram Family Trust (25% beneficiary) **Focus areas**: Education, healthcare, skills training **Geographic scope**: Indonesia, Nigeria, Singapore, Estonia **Website**: ishktolaram.com

Ishk Tolaram Foundation empowers underserved communities through education, healthcare, and skills training. Its healthcare work includes: - 1,250+ cataract surgeries in Nigeria (in partnership with Tulsi Chanrai Foundation) - Eyecare programme development in Indonesia - Exploration of prosthetic limb camps in Nigeria

The Foundation is both an operating and grantmaking organisation, registered as a Grantmaking Philanthropic Organisation with IRAS.

Relevance to UNFPA: Demonstrates the model of Singapore-registered foundations funding healthcare in developing countries. Its Nigeria and Indonesia operations parallel the geographic areas where UNFPA has significant programmes. Potential co-investor in Southeast Asian health initiatives.

3.7.8 6.8 Octava Foundation

Type: Private foundation **Established**: Within the last decade **Focus areas**: Equitable quality education, mental well-being promotion **Geographic scope**: Singapore (primary); Southeast Asia (supporting) **Website**: octavafoundation.org

Octava Foundation works across two interconnected tracks: equitable quality education and early promotion of mental well-being. It partners with organisations that integrate innovative solutions into existing systems. While not a health funder per se, its mental well-being focus intersects with maternal mental health — a growing priority in Singapore's public health agenda (as evidenced by KKH's EMPOWER2 programme targeting postnatal depression).

Relevance to UNFPA: Potential alignment on maternal mental health and adolescent well-being. Secondary priority for engagement.

3.8 CHAPTER 7: CROSS-CUTTING ANALYSIS

3.8.1 Where the Money Goes: Funding Flow Patterns

Singapore's health philanthropy flows overwhelmingly toward **domestic institutions** — hospitals, medical schools, and research centres. The five largest health-related gifts identified in this research are all directed at Singapore-based institutions:

Gift	Amount	Recipient	Funder
SingHealth Duke-NUS AMC gift	S$50M	SingHealth Duke-NUS	Lee Foundation
SingHealth medical research gift	S$40M	SingHealth	Ngee Ann Development (Ngee Ann Kongsi)
KKH centenary programmes	S$30M+	KK Women's and Children's Hospital	Multiple philanthropic partners

Gift	Amount	Recipient	Funder
Maternal and child health endowment	S$100M	Temasek Foundation programmes	Temasek Trust
TCM education gift	S$12.5M	NTU	The Ngee Ann Kongsi

International health funding from Singapore-based philanthropy is a small fraction of total giving. The WAH Foundation's Cambodia midwifery programme, Ishk Tolaram's Nigeria healthcare work, and Quantedge's Philippines nutrition project are exceptions rather than the norm. The PAA HHP Community (US$100M target for Southeast Asia) represents the first large-scale attempt to channel Singapore-based philanthropic capital toward international health outcomes.

3.8.2 The Reproductive Health Gap

A critical finding of this analysis: **no Singapore-based foundation has an explicit focus on reproductive health, family planning, or SRHR as understood in the UNFPA mandate**. Maternal health receives attention through Temasek Foundation's Richard Magnus Endowment and Tanoto Foundation's MRF, but reproductive health — contraceptive access, family planning, adolescent SRHR, comprehensive sexuality education — is conspicuously absent from Singapore's philanthropic landscape.

This gap has structural explanations: 1. **Political sensitivity**: Singapore's government maintains careful control over reproductive health policy (population incentives, pronatalist messaging). Foundations — particularly government-linked ones like Temasek Foundation — avoid areas that could conflict with government positioning. 2. **Domestic orientation**: Singapore's own maternal mortality is extremely low (estimated 8 per 100,000 live births). Domestic philanthropy for maternal health focuses on innovation and quality improvement rather than access — the urgent challenge in UNFPA's programme countries. 3. **Absence of SRHR advocacy infrastructure**: Unlike countries with strong reproductive rights movements (US, UK, Nordics), Singapore has no dedicated SRHR advocacy foundation. AWARE covers reproductive rights within a broader gender equality mandate but is not a funder.

Implication for UNFPA: The LKYSPP team should frame SRHR-resilience proposals using the language of "maternal and child health" and "health system resilience" rather than "reproductive health" or "SRHR" when engaging Singapore-based funders. The HHP Community's MNCHN framing — which avoids politically charged terminology while encompassing the substance of SRHR programming — is a model to follow.

3.8.3 Concentration Risk

Singapore's philanthropic landscape is highly concentrated. The top 10 organisations account for S$316 million — 75% of total tracked giving. A single foundation (DBS

Foundation at S$102.6M) accounts for nearly 25% of the total. This means: - A relationship with 3–5 key foundations could unlock the majority of available health philanthropy - Loss of one anchor partner could significantly reduce the funding pipeline - The LKYSPP team should prioritise depth of relationship with Tier 1 and Tier 2 foundations over breadth

3.8.4 Gender Lens

Explicit gender-lens philanthropy is nascent in Singapore. Among the foundations profiled: - **AWARE** has the strongest gender mandate but is an advocacy organisation, not a funder - **DBS Foundation** funded Project Baala (menstrual health for women in India) through its SE grant programme - **Temasek Foundation** and **Tanoto Foundation** fund maternal health but frame it through a health lens rather than a gender lens - **AVPN** explicitly includes gender as a cross-cutting theme and mobilises capital to improve outcomes for women and girls

No foundation profiled has a dedicated gender-lens investing strategy or a fund specifically for women's health and rights. This is another gap the LKYSPP team could address in its PPP design — potentially by proposing a gender-lens health resilience fund as a structured vehicle at CFS.

3.8.5 Geographic Orientation

Geographic Focus	Foundations
Singapore domestic	Lee Foundation, Ngee Ann Kongsi, Shaw Foundation, Tote Board, KKH, Singapore Children's Society, KidSTART, Club Rainbow
Singapore + Southeast Asia	Temasek Foundation, DBS Foundation, Lien Foundation, Octava Foundation, CFS
Southeast Asia + broader Asia	Tanoto Foundation, Quantedge (QAI), PAA, AVPN
Singapore + developing world	WAH Foundation, Ishk Tolaram Foundation
Global	Moh Family Foundation, Low Tuck Kwong Foundation

The concentration of aligned foundations in the "Southeast Asia + broader Asia" category is encouraging for UNFPA's regional agenda. The PAA HHP Community's explicit Southeast Asia focus aligns with UNFPA's APRO (Asia-Pacific Regional Office) geography.

3.9 CHAPTER 8: THE FAMILY OFFICE LAYER

3.9.1 Scale and Structure

Singapore hosts an estimated over 2,000 single-family offices (up from ~1,400 in 2023) (SFOs) registered under MAS Section 13O/13U tax incentive schemes, with total AUM estimated at USD 200–400 billion (precise figures not publicly disclosed). The sector grew from approximately 400 SFOs in 2020, driven by geopolitical diversification from Hong Kong and wealth migration from China, Indonesia, and India.

MAS incentive schemes require qualifying FOs to: - Invest a minimum percentage in Singapore-domiciled assets - Meet minimum AUM thresholds (S$20 million for 13O; S$50 million for 13U) - Increasingly demonstrate philanthropic or community investment activity

The **Philanthropy Tax Incentive Scheme** (2023) allows SFOs to receive 100% tax deduction for overseas donations — directly incentivising international philanthropic giving from the family office sector.

3.9.2 Health Investment Appetite

Qualitative evidence from industry surveys (Campden Wealth, UBS/PwC) suggests: - Most FOs prioritise capital preservation and commercial returns; ESG is a secondary overlay - An estimated 10–20% of Singapore FOs have genuine impact investing appetite - **Climate** is the dominant impact theme; **health/SRHR is uncommon** - A small but growing number of FOs have dedicated philanthropy teams or philanthropic mandates - Healthcare/life sciences is a growing allocation sector, driven by Asian ageing demographics and biotech opportunities - The next generation is reshaping priorities — pushing for greater ESG and impact investing engagement

3.9.3 Named Family Offices and Foundations with Potential Health Relevance

MAS does not publish a public registry of SFOs. The following are publicly known Singapore-based family offices and foundations identified through media reporting, corporate filings, and philanthropic announcements. This is not exhaustive — most of the 2,000+ SFOs operate privately.

3.9.3.1 Tier A: Directly Health-Relevant or Already Philanthropically Active in Health

Family/Principal	Entity	Wealth Source	Est. Net Worth	Health/Philanthropy Relevance
Khoo Teck Puat (estate)	Khoo Teck Puat Foundation	Banking (OCBC/Maybank), hotels	S$9.2B (estate)	S$345M+ to healthcare; S$135M to SingHealth (2026); S$50M NUH Children's Medical Institute
Sukanto Tanoto	Tanoto Foundation	RGE (palm oil, pulp, energy)	US$4B+	MRF (S$5M/yr); CHaMP Centre; PAA HHP co-lead
Low Tuck Kwong	Low Tuck Kwong Foundation	PT Bayan Resources (coal)	US$4.2B	S$127.6M disbursed (2023); hospitals
Laurence Moh (estate)	Moh Family Foundation	Furniture industry	Not disclosed	S$22.4M (75.1% to health)
Ray Dalio	Dalio Foundation (SG)	Bridgewater Associates	US$15B	Registered SG charity June 2023; Dalio Centre for Health (global); US$1.4M SG grants (2023)
Bill Gates	Gates Foundation (SG office)	Microsoft, investments	US$108B	SG office opened May 2025; co-leads PAA HHP (US$100M target); "strengthen global health partnerships across Southeast Asia"

Family/Principal	Entity	Wealth Source	Est. Net Worth	Health/Philanthropy Relevance
Eduardo Saverin	Elaine & Eduardo Saverin Foundation	Facebook co-founder	US$43B	Registered Sept 2023; grants to education and healthcare initiatives
Tsao family	Tsao Family Office / Tsao Foundation	Shipping (IMC Group)	Not disclosed	Impact investing in health/education/climate; Tsao Foundation for ageing; Duke-NUS partnerships

3.9.3.2 Tier B: Significant Wealth in Singapore with Broader Philanthropic Activity

Family/Principal	Entity	Wealth Source	Est. Net Worth	Known Philanthropy
Wee family	Wee Investments Pte Ltd	UOB (banking)	US$5–7B	Singapore's largest SFO by AUM; UOB Foundation (arts, children, education)
Kwee family	Kwee Investment Office	Pontiac Land Group (real estate)	US$3B+	Real estate and hospitality; limited public health philanthropy
Goh Cheng Liang	Wuthelam Holdings	Nippon Paint (majority owner)	US$20B+	Significant wealth but low public philanthropic profile
Sergey Brin	Bayshore Global Management	Google/Alphabet co-founder	US$258B	SG office since 2020; AUM US$30.1B; limited public SG philanthropy

Family/Principal	Entity	Wealth Source	Est. Net Worth	Known Philanthropy
James Dyson	Dyson family office	Dyson (technology)	US$11.9B	SG-based since 2019; engineering/technology focus
Widjaja family	Sinar Mas family office	Sinar Mas Group (Indonesia)	US$10B+	MAS-licensed SFO since 2021; conglomerate with healthcare interests in Indonesia
Jimmy Budiarto	Rao Family Foundation	Gold mining (Indonesia)	Not disclosed	Registered SG charity 2023; causes not fully disclosed
Bachtiar Karim	Karim Family Foundation	Musim Mas (palm oil, Indonesia)	Not disclosed	Registered SG charity; causes not fully disclosed
Mohamed Salleh Marican	Salleh Marican Foundation	Second Chance Properties	Not disclosed	Registered June 2022; community focus

3.9.3.3 Tier C: Known SFOs Without Public Health/Philanthropy Mandates

Family/Principal	Entity	Wealth Source
Apricot Capital	David Teo family office	Instant coffee
AT Capital Group	Arvind Tiku family office	Trading/investments
AJ Capital Singapore	Abhinav Jhunjhunwala	Commodities (launching $100M healthcare/education fund)
Rumah Group	Steve Melhuish	PropertyGuru; climate impact investing
Liang Xinjun	SG family office	Fosun Group co-founder (China)
Shu Ping	SG family office	Haidilao International (hotpot)
Mukesh Ambani	SG family office	Reliance Industries (India)

Key insight: AJ Capital Singapore is notable — it is reportedly launching a **US$100 million fund for healthcare and education investments in Asia**, which could be directly relevant to UNFPA's agenda if the fund accepts development-oriented deal flow.

3.9.4 Regulatory Framework for FO Philanthropy

Philanthropy Tax Incentive Scheme (PTIS, 2024): - 100% tax deduction for overseas donations from approved SFOs - Capped at 40% of donor's statutory income or S$50 million (whichever is lower) - Five-year scheme - **Uptake has been slow**: Only 9 applications and expressions of interest received by MAS as of August 2024

Grantmaker Scheme: - The Commissioner of Charities reported approximately 5 new charities per year registered under the Grantmaker Scheme over the past three years - This scheme relaxes certain regulatory requirements to encourage philanthropy

13O/13U Conditions: - SFOs under tax incentive schemes must declare AUM, local expenditure, and investment professional headcount to MAS and IRAS annually - MAS is tightening oversight: ~3% of 1,300 applications flagged; 2 SFO funds linked to sanctioned individuals had incentives ceased

3.9.5 Access Pathways

Family offices are private, non-transparent entities with no public registry of investment mandates. Engagement requires intermediaries:

Intermediary	Role	How to Access
AVPN	Network connector; conference convening	Membership
CFS	DAF structuring; donor matching	Direct approach
PAA	High-level convening; co-investment	Via Temasek Trust
DBS Private Bank	Philanthropy advisory for FO clients	Bank relationship
UOB Foundation / OCBC	Private bank philanthropy advisory	Bank relationship
Private law firms	Structuring counsel; warm introductions	Professional network

3.9.6 What Family Offices Could Fund

Based on the analysis in UNFPA-R-03, realistic family office contributions include: 1. **Catalytic grants through CFS DAFs**: Family donates to their DAF; DAF grants to SRHR-resilience programme. S$500,000–5 million per family. Lowest barrier. 2. **First-loss capital in blended finance vehicles**: FO takes concessional position

to attract DFI co-investment. Requires dedicated philanthropy team. 3. **Endowment contributions**: Patient capital for a regional SRHR-resilience platform. 10–25 year horizon. 4. **In-kind expertise**: FO principals with healthcare or logistics backgrounds contributing advisory capacity.

3.9.7 What Is Not Realistic

Expecting family offices to design, structure, or lead SRHR programming. They are capital providers, not programme architects. UNFPA and the LKYSPP team must build the investment-ready vehicle; the family office role is to provide patient capital into it.

3.10 CHAPTER 9: NEGATIVE LIST — FOUNDATIONS NOT RECOMMENDED FOR UNFPA ENGAGEMENT

This chapter catalogues prominent Singapore-based foundations and philanthropic organisations that the LKYSPP team will encounter in Singapore's networks but that are **not appropriate targets for UNFPA SRHR engagement**. Understanding why these organisations are excluded prevents wasted engagement effort and sharpens the team's focus on the Tier 1–3 targets.

3.10.1 9.1 Government-Linked Entities with Structural Incompatibility

3.10.1.1 Tote Board (Singapore Totalisator Board)

Type: Statutory body **Annual disbursement**: S$183.2 million (FY2023) across 27 programmes and 772 fundraising projects **Focus areas**: Arts, community development, education, health, social service, sports **Source of funds**: Gambling proceeds (Singapore Pools, Singapore Turf Club)

Tote Board does fund health programmes — the Tote Board Community Health Fund supports innovative community health pilots, the Tote Board Better Health Fund supports ageing-in-place services, and the Our Healthy Singapore Fund (via HPB) targets health behaviour change. However, all Tote Board grants are **exclusively domestic** — they fund Singapore-based programmes for Singaporean beneficiaries only. Tote Board has no international grant-making mandate and no mechanism to fund cross-border health programming. It also primarily funds innovation pilots that, if successful, are mainstreamed by the Singapore government — a model incompatible with UNFPA's developing country programme structure.

Exclusion reason: Domestic-only mandate; no international grant-making mechanism.

3.10.1.2 GIC (Government of Singapore Investment Corporation)

Type: Sovereign wealth fund **AUM**: Estimated USD 700 billion+ (not publicly disclosed) **Focus**: Commercial returns

GIC is a commercial investment vehicle for Singapore's reserves. It has begun integrating ESG considerations into investment analysis but has no philanthropic mandate, no grant-making function, and no social investment arm. GIC cannot fund development programmes and would not consider concessional investments in SRHR. See UNFPA-R-03 for a detailed analysis of GIC's potential role in blended finance structures (which would require commercial-return tranches).

Exclusion reason: Purely commercial investment mandate; no philanthropy function.

3.10.1.3 Singapore International Foundation (SIF)

Type: Government-linked foundation **Focus**: Volunteerism, knowledge exchange, people-to-people diplomacy

SIF supports Singaporeans sharing expertise with developing countries through volunteer programmes and exchange fellowships. While it has health-adjacent activities (training health officials), it is not a grant-maker for health programmes. SIF could serve as a soft diplomatic connector (referenced in UNFPA-R-03 as a "soft entry point") but should not be approached as a funder.

Exclusion reason: Not a grant-maker; volunteerism and diplomacy platform only.

3.10.2 9.2 Corporate Foundations with Non-SRHR Mandates

3.10.2.1 Keppel Care Foundation

Type: Corporate foundation (Keppel Group) **Annual giving**: S$4.8 million (2024) **Focus**: Environment, education, arts and culture, underprivileged

Keppel Care Foundation funds dementia support (S$1 million over 3 years to Dementia Singapore), wildlife conservation (S$300,000 to Mandai Nature), digital literacy (S$100,000 to Digital for Life Fund), and kidney health awareness (NKF partnership). Its health-adjacent giving is entirely domestic and targets specific conditions (dementia, kidney disease) unrelated to SRHR. No international health mandate.

Exclusion reason: Domestic focus; health giving limited to specific conditions (dementia, kidney); no SRHR or international health alignment.

3.10.2.2 OCBC #OCBCCares Programme

Type: Corporate philanthropy programme (OCBC Bank) **Focus**: Vulnerable communities (seniors, special needs, low-income families), environment

OCBC's community philanthropy includes the Families100 Programme (social uplift for 100 lower-income families with MSF), Healthcare With Minds (domestic mental health), and the #OCBCCares Environment Fund (mangrove restoration in Singapore and Malaysia). No international health programme. The bank does have private banking philanthropy advisory services that could be relevant as an intermediary (for introducing family office clients to SRHR opportunities) but the corporate philanthropy arm itself has no UNFPA alignment.

Exclusion reason: Domestic focus; environment-primary orientation; health component limited to mental health; no SRHR mandate.

3.10.2.3 UOB Heartbeat / UOB Foundation (est. 2026)

Type: Corporate philanthropy programme / forthcoming corporate foundation **Lifetime fundraising**: S$23.3 million+ (via Heartbeat Run since 2007) **Focus**: Art, children, education

UOB's philanthropic identity is built around Southeast Asian art (UOB Painting of the Year, museum partnerships), children's art education, and digital learning. The forthcoming UOB Foundation (operational second half of 2026) will focus on scholarships, digital learning, and financial literacy — not health. The "children" pillar is arts-based, not health-based. No maternal, reproductive, or children's health programmes.

Exclusion reason: Arts-first identity; children focus is arts/education, not health; no health mandate in current or planned foundation.

3.10.2.4 Mapletree CSR Programme

Type: Corporate CSR programme (Mapletree Investments) **Lifetime CSR allocation**: S$41.3 million **Focus**: Arts, education, environment, healthcare

Mapletree's four CSR pillars include healthcare, but in practice this pillar is small-scale and domestic — community health initiatives during Mapletree Community Month, endowed bursaries at Singapore universities, and arts patronage (National Arts Council Patron of the Arts Award since 2012). The primary identity is arts and education, not health. Annual CSR is formula-based (S$1 million per S$500 million PATMI), limiting capacity for large health investments.

Exclusion reason: Healthcare pillar is marginal and domestic; primary identity is arts patronage; formula-based CSR limits scale.

3.10.2.5 Singtel Touching Lives Fund (STLF)

Type: Corporate philanthropy fund (Singtel) **Lifetime fundraising**: S$58 million+ (since 2002) **Focus**: Special education for children with special needs

STLF is one of Singapore's most successful corporate philanthropy programmes — but its mandate is extremely specific: funding six special education (SPED) schools serving 1,800+ students annually. It has expanded into digital enablement and online safety for vulnerable groups, but its core remains SPED education. No maternal health, reproductive health, or international health component. Singtel's broader

community impact includes disability employment and migrant worker support — none aligned with SRHR.

Exclusion reason: Hyper-specialised mandate (SPED schools); no health or international dimension.

3.10.2.6 CapitaLand Hope Foundation (CHF)

Type: Corporate foundation (CapitaLand Group) **Lifetime giving**: S$64 million+ across 150+ initiatives (since 2005) **Focus**: Education, health, well-being for children, youth, seniors; community resilience

CHF is the most borderline case on the negative list. In February 2025, it launched a S$3 million Community Resilience Initiative for vulnerable children and youth across China, India, Singapore, and Vietnam — the closest any foundation on this list comes to UNFPA alignment. However, CHF's health component is focused on social inclusion and community resilience (access to education, food security, shelter) rather than clinical maternal or reproductive health. Its geographic scope (CapitaLand's operational markets) does not match UNFPA's priority countries. CHF could potentially be a marginal connector for UNFPA work in Vietnam or India, but should not be a primary engagement target.

Exclusion reason: Health focus is social inclusion, not SRHR; geographic scope tied to CapitaLand's markets; too marginal for primary UNFPA engagement.

3.10.3 9.3 Private/Family Foundations with Education-Only Mandates

3.10.3.1 Kuok Foundation

Type: Private family foundation (Kuok family — Robert Kuok, founder of Shangri-La and Wilmar) **Established**: 1970 (Malaysia; operates across Malaysia and Singapore) **Focus**: Education and poverty alleviation through education

Kuok Foundation's activities since 1970 have been almost entirely focused on scholarships and study awards — full-fee scholarships at Singaporean public universities, Malaysian public and private universities, and UK institutions. The Foundation also provides funding for welfare homes and rehabilitation centres, but has no health programme, no SRHR mandate, and no international health investment. Its Singapore activities are limited to university scholarships.

Exclusion reason: Purely education/scholarship-focused; no health mandate; no SRHR alignment.

3.10.3.2 Wilmar International CSR

Type: Corporate CSR programme (Wilmar International — world's largest palm oil processor) **Annual CSR budget**: ~US$10 million **Focus**: Education (70+ schools in China, Indonesia, Malaysia, Africa), community welfare, sustainable agriculture (NDPE policy)

Wilmar's CSR is directed at operational communities — plantation workers, rural families in production regions. It manages 70+ schools and provides healthcare for workers and local communities. While this includes some maternal and child health in plantation settings, it is embedded in corporate operations rather than structured as grantable philanthropy. Additionally, Wilmar's palm oil sector creates **significant reputational risk** for UNFPA partnership — deforestation and labour rights concerns (despite the NDPE policy) would create public relations exposure.

Exclusion reason: CSR tied to corporate operations, not grantable; palm oil sector reputational risk; no structured health philanthropy.

3.10.4 9.4 Summary: Negative List Quick Reference

Organisation	Annual Giving	Primary Focus	Exclusion Reason
Tote Board	S$183.2M	Arts, health, education, sports, social	Domestic-only mandate
GIC	N/A (commercial)	Commercial investment	No philanthropy function
Singapore International Foundation	N/A	Volunteerism, diplomacy	Not a grant-maker
Keppel Care Foundation	S$4.8M	Environment, education, arts	No SRHR; domestic-only health
OCBC #OCBCCares	Not disclosed	Vulnerable communities, environment	Domestic; no SRHR mandate
UOB Heartbeat / Foundation	~S$2M/yr	Art, children, education	Arts-first; no health mandate
Mapletree CSR	~S$2M/yr	Arts, education, environment	Healthcare marginal; arts-primary
Singtel Touching Lives	~S$3M/yr	Special education (SPED)	Hyper-specialised; no health
CapitaLand Hope Foundation	~S$5M/yr	Education, health, resilience	Social inclusion focus, not SRHR
Kuok Foundation	Not disclosed	Education scholarships	Education-only; no health
Wilmar CSR	~US$10M	Rural education, community	Operational CSR; reputational risk

---

3.11 CHAPTER 10: STRATEGIC ENGAGEMENT RECOMMENDATIONS FOR UNFPA

Note: Chapter numbering updated to accommodate the Negative List (Chapter 9). The original Chapters 9 and 10 are now Chapters 10 and 11.

3.11.1 Priority 1: Integrate with the PAA Health for Human Potential Community (Immediate)

The HHP Community is the single most aligned and well-resourced funding mechanism available. Recommended actions: - **Position UNFPA as a technical partner** within the HHP Community's Collective Impact Framework, contributing programme design expertise, country-level implementation infrastructure, and MNCHN evidence - **Engage through Temasek Trust** and the PAA Secretariat — the LKYSPP team's institutional connection to the Temasek ecosystem is its strongest asset - **Participate in HHP Community working sessions** to shape the portfolio of projects that will receive funding - **Timeline**: Engagement should begin immediately; the Community is in its framework co-development phase (2025–2026), which is the optimal window to influence priorities

3.11.2 Priority 2: Build Bilateral Relationships with Temasek Foundation and Tanoto Foundation (6–12 months)

These two foundations have the most direct maternal and child health mandates: - **Temasek Foundation**: Propose a co-funded programme extending the IMCWH model to climate-vulnerable communities in Southeast Asia — leveraging the Richard Magnus Endowment's focus on mothers and children with UNFPA's regional resilience agenda - **Tanoto Foundation**: Propose a joint research programme under the MRF focused on maternal health in climate-affected Asian settings — linking the CHaMP Centre's clinical expertise with UNFPA's programme data - **Access**: Through LKYSPP institutional relationships, SingHealth Duke-NUS network, and KKH research leadership

3.11.3 Priority 3: Structure a CFS Donor-Advised Fund for SRHR-Resilience (6–18 months)

Create a dedicated DAF at CFS that can receive contributions from multiple donors (family offices, foundations, individual philanthropists) toward SRHR-resilience programming in Asia: - **Simplest funding instrument available** — no investment return expectation; pure grant - **Tax-efficient** for Singapore-based donors (250% IPC deduction for domestic contributions; 100% deduction for overseas humanitarian donations under the new scheme) - **Scalable**: S$2–10 million per year at realistic mobilisation; more if an anchor family donor is engaged - **CFS manages due diligence and compliance**, reducing operational burden on UNFPA

3.11.4 Priority 4: Explore the Moh Family Foundation (Opportunistic)

The Moh Family Foundation's 75.1% health allocation and recent incorporation (2021) make it a potential first-mover partner for SRHR-resilience: - **Approach through intermediaries** (CFS, AVPN, private bank advisory) to understand the Foundation's strategic priorities - **If receptive**, propose a named programme or co-funded initiative - **Risk-adjusted**: This is speculative given limited public information — pursue only if intermediary conversations indicate interest

3.11.5 Priority 5: Leverage KKH and WAH Foundation as Proof-of-Concept Partners (Ongoing)

KKH's clinical expertise and the WAH Foundation's midwifery training model are concrete demonstrations of Singapore's maternal health export capability: - **Include KKH/WAH case studies** in any pitch to Singapore-based funders — they answer the question "has this ever been done before?" - **Explore formal partnership** with WAH Foundation for midwifery training components of the resilience PPP - **Connect UNFPA's midwifery strengthening work** (documented in UNFPA-W-09) with KKH's EMPOWER2 community midwifery pilot

3.11.6 Messaging Framework

When engaging Singapore-based funders, the LKYSPP team should:

Do	Don't
Use "maternal and child health" framing	Lead with "SRHR" or "reproductive rights"
Emphasise "health system resilience"	Frame as "humanitarian aid"
Reference Singapore's ASEAN leadership role	Position Singapore as merely a funding source
Cite PAA HHP Community alignment	Propose standalone, disconnected programmes
Present evidence from UNFPA-W-01 on what works	Make abstract claims about maternal mortality
Highlight WAH Foundation as Singapore success story	Ignore existing Singapore-ASEAN health partnerships

---

3.12 CHAPTER 11: CONCLUSION

Singapore's philanthropic landscape offers genuine — but carefully bounded — opportunities for UNFPA's SRHR-resilience agenda. The landscape is characterised by:

Strengths: Significant capital (S$419 million in annual giving; S$5.4 trillion in AUM), a growing policy infrastructure supporting international philanthropy (overseas tax

deductions, matching grants), and the emergence of the PAA Health for Human Potential Community — a US$100 million multi-funder coalition explicitly targeting MNCHN outcomes in Southeast Asia.

Constraints: Domestic orientation of most giving, political sensitivity around reproductive health terminology, absence of a dedicated SRHR philanthropic champion, and concentration of capital in a small number of foundations.

The strategic opportunity: The PAA HHP Community represents a once-in-a-decade alignment between Singapore's philanthropic capital, government priorities (ASEAN health resilience), and UNFPA's mandate. The LKYSPP team's role is to position UNFPA as the indispensable technical partner that can translate philanthropic capital into measurable health outcomes across Southeast Asia.

The foundations profiled in this report — from Temasek Foundation's S$100 million endowment for mothers and children, to the WAH Foundation's midwives saving lives in rural Cambodia — demonstrate that the building blocks for a Singapore-based SRHR-resilience partnership already exist. The task is not to create something from nothing, but to connect what already exists into a coherent, funded, and accountable programme.

3.13 APPENDIX A: FOUNDATION QUICK-REFERENCE TABLE

#	Organisation	Type	Tier	FY2024 Disbursement	Health Focus	UNFPA Alignment	Access Path
1	Temasek Foundation	Govt-linked	1	Not disclosed	S$100M MCH endowment	Very Strong	Temasek Trust, PAA
2	Tanoto Foundation	Family	1	~S$11M	S$5M/yr MRF; CHaMP	Strong	SingHealth, KKH
3	Quantedge (QAI)	Family	1	Not disclosed	HHP Community co-lead	Very Strong	PAA
4	DBS Foundation	Corporate	1	S$102.6M	KidSTART; SE grants	Moderate	Open call; DBS PB
5	Lee Foundation	Family	2	S$33.2M	S$50M SingHealth	Moderate	SingHealth, NUS

#	Organisation	Type	Tier	FY2024 Disbursement	Health Focus	UNFPA Alignment	Access Path
6	Moh Family Foundation	Family	2	S$22.4M	75.1% to health	Mod-Strong	CFS, AVPN
7	Low Tuck Kwong Fdn	Family	2	S$23.2M	Hospitals	Low-Mod	LKYSPP
8	Shaw Foundation	Family	2	~S$5M	NKF, paediatric	Low-Mod	Formal proposal
9	Ngee Ann Kongsi	Clan	2	S$40.6M	SingHealth, TCM	Low	SingHealth, NTU
10	CFS	Community Fdn	3	S$28.4M	Cause-neutral	High (channel)	Direct
11	Lien Foundation	Family	3	S$24.4M	Eldercare, palliative	Low (connector)	Direct, AVPN
12	AVPN	Network	3	N/A	MNCHN pooled fund	High (connector)	Membership
13	PAA	Platform	3	N/A	HHP Community	Very High	Temasek Trust
14	AWARE	Advocacy	4	N/A	Reproductive rights	Mod (knowledge)	Direct
15	KKH	Hospital	4	N/A	MCH clinical/research	High (partner)	SingHealth
16	WAH Foundation	NGO	4	N/A	Midwifery training	High (model)	Direct
17	SG Children’s Society	VWO	4	N/A	Child welfare	Mod (partner)	Direct
18	Club Rainbow	VWO	4	N/A	Chronic illness children	Low	N/A

#	Organisation	Type	Tier	FY2024 Disbursement	Health Focus	UNFPA Alignment	Access Path
19	KidSTART	Govt-linked	4	N/A	Early childhood	Mod (partner)	MSF
20	Ishk Tolaram Fdn	Family	4	N/A	Healthcare (Nigeria/ID)	Low-Mod	AVPN
21	Octava Foundation	Family	4	N/A	Mental well-being	Low	Direct
22	Khoo Teck Puat Foundation	Estate	2	S$135M (2026)	S$345M+ to healthcare; MCH research at SingHealth	Strong	SingHealth
23	UBS Optimus Foundation SG	Global fdn	2	S$17.1M	Children's health; USD 366M global	Mod-Strong	UBS PB
24	FairPrice Foundation	Corporate	2	S$12.7M	Nutrition; KKH partnership	Low-Mod	Direct
25	Babes Pregnancy Crisis	VWO	4	N/A	Adolescent pregnancy support	Mod (partner)	Direct
26	Mount Alvernia Hospital	Nonprofit hospital	4	N/A	Maternity for vulnerable women	Mod (partner)	Direct
27	Tsao Foundation	Family	4	N/A	Ageing; Duke-NUS research	Low (connector)	Direct

3.14 APPENDIX B: METHODOLOGY AND DATA SOURCES

3.14.1 Primary Data Sources

Source	Data Type	Coverage	Access
Soristic Impact Collective 2025	Foundation disbursements, rankings	126 organisations (FY2024)	soristic.asia
Soristic Impact Collective 2024	Foundation disbursements, rankings	117 organisations (FY2023)	soristic.asia
Commissioner of Charities Annual Report 2024	Registered charities, sector statistics	All registered charities	charities.gov.sg
MCCY Charities Statistics	Charity counts by sector	All sectors	mccy.gov.sg
MAS Asset Management Survey 2022	AUM, family office data	Singapore financial sector	mas.gov.sg
Foundation websites and media releases	Programme details, grant amounts	Individual foundations	Various
AVPN member database	Network membership	700+ organisations	avpn.asia
PAA Summit proceedings 2025	HHP Community details	Summit participants	philanthropyasiaalliance.org
CAF World Giving Index 2024	Global giving rankings	142 countries	cafonline.org

3.14.2 Limitations

1. **Private data**: Family office investment mandates, private foundation strategies, and internal funding pipelines are not publicly disclosed. Estimates of family office impact investing appetite are based on industry surveys with self-selection bias.
2. **Soristic coverage**: The Soristic reports track only organisations above certain disbursement thresholds and that file public financial statements. Smaller foundations, informal giving, and cross-border philanthropy structured outside Singapore may not be captured.
3. **Timeliness**: Financial data is based on FY2023–2024 filings. Programme announcements are current through April 2026. Foundation strategies may have evolved since the latest public disclosures.
4. **SRHR-specific data**: No Singapore foundation publishes a breakdown of giving by SRHR sub-area. Health allocations are reported at the sector level (e.g., “health” or “healthcare”) without granularity on maternal, reproductive, or children’s health specifically. The Moh Family Foundation’s 75.1% health allocation is the most granular public data point available.

5. **Evidence quality**: Strong on foundation-level financial data (audited statements, official announcements). Moderate on family office behaviour (survey-based). Weak on whether Singapore-based philanthropy can be effectively mobilised for international SRHR at scale — the PAA HHP Community is the first real test, and outcomes data does not yet exist.

End of Report

Document version: 1.0 **Last updated**: April 2026 **Author**: LKYSPP Policy Innovation Lab (UNFPA Challenge B research team) **Parent document**: UNFPA-R-05 — Singapore-Based Foundations and Charities Directory for Maternal, Reproductive, and Children's Health
